

Physical Regeneration (place-shaping)

Our involvement in physical regeneration projects helps shape quality places: in priority areas and neighbourhoods. We provide design, planning, project management and community engagement expertise to clients. Our broad range of skills enables us to:

- prepare area or site focused strategies and plans
- generate creative ideas and deliver technical solutions
- develop projects that deliver improvements over the short, medium and long term.

Delivering places that work is at the heart of our design approach. A particular focus of our approach is transforming the public realm so that it is well laid-out and user friendly.

We work with the community and other organisations from the earliest stages of our projects. The team includes urban designers, landscape architects, planners and regeneration specialists.

We have been involved in a number of high-profile projects across the city, including:

- **Community at Heart** - a transformation of the public realm serving the Barton Hill community

- **Community Vision for Lockleaze** - supporting local residents to develop a vision for a sustainable community
- **Providing expert advice for Public Realm development** - around Cabot Circus, Quakers Friars, Temple Quay, Temple Quay North
- **Southmead Hospital** - working with the health authority to create a 21st century hospital environment.

1. Quakers Friars
2. Southmead Hospital
