

Planned Highway Maintenance Works 2026-2027

The highway maintenance works programme below is projected to take place in financial year 2026-2027. However it is subject to change as highway maintenance programmes are continually reviewed, reprioritised and can be affected by factors such as design development, statutory approvals, land or utility issues, procurement timescales, contractor availability, and funding conditions.

Summary	Total
Total resurfacing length (m)	1,558
Total surface dressing and micro asphalt length (m)	35,312
Total pre-patching area (m2)	20,900
Total slurry seal area (m2)	207,227

Definitions
Resurfacing: The removal and replacement of the existing surface, in order to restore the running surface and improve surface characteristics
Surface dressing: A layer(s) of aggregate combined with one or more layers of binder to form a running surface laid over the existing surface
Micro asphalt: A site-mixed, cold-applied asphalt surface course. A more eco-friendly alternative to hot asphalt (surface dressing)
Slurry seal: A thin layer of surfacing treatment used to waterproof the surface, repair minor imperfections, and extend the life of the footway
Pre-patching: A programme of foundation repairs to remove and replace sections of a carriageway prior to surface dressing
