# Deprivation in Bristol 2015

---

## Summary of key findings

- ❖ The Indices of Deprivation 2015 reinforce previously identified patterns of deprivation across the city. Bristol continues to have deprivation 'hot spots' that are amongst some of the most deprived areas in the country yet are adjacent to some of the least deprived areas in the country.
- ❖ Since 2010, Bristol has on the whole seen a greater increase in levels of relative deprivation than the other English Core Cities, however, this was mostly from a less deprived starting point. Bristol still remains one of the least deprived of the English Core Cities based on the Index of Multiple Deprivation 2015.
- ❖ In Bristol 16% of residents - 69,000 people - live in the most deprived areas in England, including 17,800 children and 10,500 older people.
- ❖ Bristol has 42 LSOAs in the most deprived 10% in England for Multiple Deprivation. Of these 42 LSOAs, there are 26 in the most deprived 5% in England and 6 in the most deprived 1% in England.
- ❖ The greatest levels of deprivation in Bristol are in Whitchurch Park, Hartcliffe, Filwood and Lawrence Hill. 'Bishopport Avenue' (E01032514) and 'Hareclive' (E01014726) are both ranked in the most deprived one hundred areas in England for Multiple Deprivation in 2015.
- ❖ A greater proportion of Bristol's population live in the most deprived areas in England in 2015 than in 2010 – 16% of Bristol's total population live in the most deprived areas compared to 14% in 2010 - an increase of two percentage points. 22% of Bristol's children live in the most deprived areas - an increase of three percentage points - and 14% of Bristol's older people live in the most deprived areas - an increase of 1.8 percentage points.
- ❖ Relative to other areas in England, Bristol has both more LSOAs in the most deprived 10% for Multiple Deprivation than in 2010 and also areas are ranked higher in terms of Multiple Deprivation relative to other areas than in 2010.
- ❖ In Bristol as a whole almost 72,000 - 17% of the population - suffers from income deprivation. The proportion varies greatly across the city from as high as 49% of people living in 'Fulford Road North' in Hartcliffe ward to 1% of people living in 'University Halls' in Stoke Bishop. On a ward basis, more than a third of people are income deprived in Lawrence Hill (36%) and Filwood (35%).
- ❖ Education, Skills and Training is where Bristol experiences some of the highest levels of deprivation. The distribution of deprivation based on this domain is more far reaching than other domains and is particularly concentrated in the social housing areas in South Bristol. Five LSOAs in Filwood and Whitchurch Park wards are ranked in the most deprived 100 out of 32,844 LSOAs in England.
- ❖ Since 2010 levels of Crime deprivation are much improved with a much lower proportion of the city falling within the most deprived 10% nationally.

## SECTION 1: What is the Index of Multiple Deprivation 2015?

### Overview

1.1 The Index of Multiple Deprivation 2015 is the official measure of relative deprivation for small areas in England. The Index of Multiple Deprivation ranks every small area in England from 1 (most deprived area) to 32,844 (least deprived area).

1.2 It is common to describe how relatively deprived a small area is by saying whether it falls among the most deprived 10 per cent, 20 per cent or 30 per cent of small areas in England (although there is no definitive cut-off at which an area is described as 'deprived').

1.3 The Indices of Deprivation 2015 provide a set of relative measures of deprivation across England, based on seven different domains of deprivation:

- Income Deprivation
- Employment Deprivation
- Education, Skills and Training Deprivation
- Health Deprivation and Disability
- Crime
- Barriers to Housing and Services
- Living Environment Deprivation

1.4 Each of these domains is based on a basket of indicators – 37 indicators in total. As far as is possible, each indicator is based on data from the most recent time point available; in practice most indicators in the Indices of Deprivation 2015 relate to the tax year 2012/13.

1.5 Combining information from the seven domains produces an overall relative measure of deprivation, the **Index of Multiple Deprivation**. In addition, there are seven domain-level indices, and two supplementary indices: the Income Deprivation Affecting Children Index and the Income Deprivation Affecting Older People Index. The Index of Multiple Deprivation, domain indices and the supplementary indices, together with the higher area geography summaries, are collectively referred to as the **Indices of Deprivation**.

1.6 When using the ID2015 it is important to remember that deprivation is experienced by individuals living in an area. Not all people living in a deprived area will be deprived and, similarly, not all deprived people live in deprived areas.

### Small areas

1.7 The small areas used are called 2011 Lower Layer Super Output Areas, of which there are 32,844 in England. They are designed to be of a similar population size with an average of 1,500 residents each and are a standard way of dividing up the country.

1.8 Some Lower Layer Super Output Area (LSOA) boundaries have changed over time. In Bristol, there were 252 LSOA01 in previous versions of the Indices of Deprivation, whilst in the 2015 indices there are 263 LSOA11. Some LSOAs were split due to an increase in

population and some LSOA boundaries were changed in order to improve homogeneity and so better reflect areas of deprivation.

### **How are the Indices of Deprivation 2015 different to the Indices of Deprivation 2010?**

1.9 The Indices of Deprivation 2015 have been produced using the same approach, structure and methodology used to create the previous Indices of Deprivation 2010 (and the 2007 and 2004 versions).

1.10 A modest number of changes to indicators have been implemented since the Indices of Deprivation 2010. Notably, these changes include broadening the indicator on housing affordability to include the private rental sector in addition to the owner-occupied sector and producing the indicator at LSOA level (not district wide), and two new indicators on (i) claimants of Carer's Allowance and (ii) English language proficiency.

### **Can the Indices be used to compare over time?**

1.11 When exploring changes in deprivation between the Indices of Deprivation 2015 and previous versions of the indices, users should be aware that changes can only be described in relative terms, for example, the extent to which an area has changed rank or decile of deprivation. They cannot be used to identify real change in deprivation over time.

1.12 Other changes that limit the ability to make comparisons other time include

- i. changes to LSOA boundaries which will affect the number of LSOAs that fall within the most deprived 10% in England whether there is any actual change in relative deprivation or not;
- ii. changes to the data used to construct the indicators, including changes to eligibility criteria for certain benefits used to measure income deprivation and employment deprivation;
- iii. revisions to the population denominator data.

### **What do people use the Index of Multiple Deprivation for?**

1.13 Since their original publication in 2000 the Indices have been used very widely for a variety of purposes, including the following:

#### **a. Targeting resources**

1.14 Use by national and local organisations to identify places for prioritising resources and more effective targeting of funding. For example, the Index of Multiple Deprivation 2010 was used by the Department for Communities and Local Government in conjunction with other data to distribute £448m of funding to local authorities for the Troubled Families Programme. In another example, the most deprived 15 per cent of neighbourhoods have been eligible for insulation measures from energy companies. The Indices have also been used by some local authorities to prioritise areas for long-term intervention.

**b. Policy and strategy**

- Development of the evidence base for setting a range of local strategies and service planning, including helping understand current need and model future demand for services.
- Supporting local growth through local economic assessment and growth strategies, for example policies related to the European Regional Development Fund where targeted intervention will be prioritised to address concentrated pockets of deprivation.
- Helping assure the equality of access to local health and other services.
- Research and analysis into the challenges and performance of different areas, and to support policy and delivery. For example, understanding the relationship between pupil attainment and neighbourhood deprivation, and analysing local deprivation as a risk factor for behaviours such as smoking.
- Assessment of programme reach and impact e.g. to identify whether the most disadvantaged areas are receiving more support under various programmes than others; and assessment of the impact of programmes at a neighbourhood level.

**c. As an analytical resource to support commissioning by local authorities and health services, and in exploring inequalities**

1.15 Public Health England (PHE) has used the Indices to produce overarching indicators for the Government's Public Health Outcomes Framework (PHOF), examining recent trends in inequalities in life expectancy and healthy life expectancy between communities. PHE has also used the Indices to illustrate inequalities in many of the other PHOF indicators and users of the PHOF data tool can now examine the relationship of every indicator with deprivation. PHE's Segment Tool uses the indices to provide information on the causes of death that are driving inequalities in life expectancy at local area level; targeting these causes should have the biggest impact on reducing inequalities.

**d. Funding bids**

1.16 The Indices are frequently used in bids for funding, and are recognised by commissioners as an authoritative, nationally comparable measure of deprivation. This includes bids made by councillors for their neighbourhoods, and from voluntary and community sector groups.

## SECTION 2: Structure and methodology

2.1 The overall Index of Multiple Deprivation 2015 describes each Lower-layer Super Output Area by combining information from all seven domains: Income Deprivation, Employment Deprivation, Health Deprivation and Disability, Education Skills and Training Deprivation, Barriers to Housing and Services, Living Environment Deprivation, and Crime.

**Figure 1: Domains of deprivation**

2.2 Seven domains of deprivation are combined to produce the overall Index of Multiple Deprivation, each of which contains a number of component indicators. The criteria for inclusion of these indicators are that they should be 'domain specific' and appropriate for the purpose of measuring major features of that deprivation; up-to-date; capable of being updated on a regular basis; statistically robust; and available for the whole of England at a small area level in a consistent form.

2.3 The domains were combined in two stages. First, each domain score was standardised by ranking, and then transformed to an exponential distribution. Then the domains were combined using the explicit domain weights chosen (see Figure 1). The overall Lower-layer Super Output Area level Index of Multiple Deprivation score was then ranked and split into deciles.

## SECTION 3: Using and interpreting the neighbourhood level results

### Ranks, deciles and scores

3.1 The 32,844 Lower-layer Super Output Areas in England are ranked according to their deprivation score. For each of the neighbourhood-level indices, the most deprived Lower-layer Super Output Area in England is given a rank of 1, and the least deprived a rank of 32,844.

Figure 2: Ranks

3.2 The deciles are produced by ranking the 32,844 Lower-layer Super Output Areas and dividing them into 10 equal-sized groups. Decile 1 represents the most deprived 10 per cent of areas nationally and decile 10, the least deprived 10 per cent of areas nationally (see Figure 3).

3.3 The ranks and deciles can straightforwardly be interpreted as showing broadly whether a Lower-layer Super Output Area is more deprived than any other such area in the country. The ranks are relative: they show that one area is more deprived than another but not by how much. For example, if an area has a rank of 1,000, it is not half as deprived as a place with a rank of 500.

3.4 The purpose of Indices of Deprivation is to measure as accurately as possible the relative distribution of deprivation at a small area level, but this comes at the expense of 'backwards' comparability. When exploring changes in deprivation between the Indices of Deprivation 2015 and previous versions of the Indices, users should be aware that changes can only be described in relative terms, for example, the extent to which an area has changed rank or decile of deprivation.

### The domains and sub-domains

3.5 Each of the seven domain scores, and six sub-domain scores, describe each type of deprivation in a Lower-layer Super Output Area. These enable users to focus on particular types of deprivation and to compare across Lower-layer Super Output Areas.

3.6 Larger scores on any of domains or sub-domains correspond to more deprived areas. The scores for the Income Deprivation Domain and the Employment Deprivation Domain are rates, and can be interpreted as the proportion of the relevant population that is

‘income deprived’ or ‘employment deprived’ respectively. So, for example, if a Lower-layer Super Output Area scores 0.38 in the Income Deprivation Domain, this means that 38 per cent of the population is income deprived in that area. For the remaining five domains it is recommended that ranks and deciles are used rather than the score, as the scores are less easy to interpret.

**Figure 3: Rank deciles**

	Rank	
<b>1-10%</b>	1	3,284
<b>10-20%</b>	3,285	6,568
<b>20-30%</b>	6,569	9,853
<b>30-40%</b>	9,854	13,137
<b>40-50%</b>	13,138	16,422
<b>50-60%</b>	16,423	19,706
<b>60-70%</b>	19,707	22,990
<b>70-80%</b>	22,991	26,275
<b>80-90%</b>	26,276	29,559
<b>90-100%</b>	29,560	32,844

3.7 The Income Deprivation Affecting Children Index is a subset of the Income Deprivation Domain, with the Index showing the proportion of children in each Lower-layer Super Output Area that live in families that are income deprived. The Income Deprivation Affecting Older People Index is similarly a subset of the Income Deprivation Domain, with the score showing the proportion of a Lower-layer Super Output Area’s population aged 60 and over who are income deprived.

3.8 As with the Income and Employment Deprivation Domain scores, the Income Deprivation Affecting Children Index and Income Deprivation Affecting Older People Index scores are rates, so can be interpreted as the proportion of the relevant population that is ‘income deprived’.

**Figure 4: How the Indices can be used**

## **Points to consider when using the data**

3.9 The neighbourhood-level Indices provide a description of areas; but this description does not apply to every person living in those areas. Many non-deprived people live in deprived areas, and many deprived people live in non-deprived areas.

3.10 The Indices are designed to identify aspects of deprivation, not affluence. For example, the measure of income deprivation is concerned with people on low incomes who are in receipt of benefits and tax credits. An area with a relatively small proportion of people (or indeed no people) on low incomes may also have relatively few or no people on high incomes. Such an area may be ranked among the least deprived in the country, but it is not necessarily among the most affluent. It may also be the case that some highly deprived areas contain pockets of affluence; that is, an area might contain both deprived and affluent people.

3.11 In addition, the Indices of Deprivation methodology is designed to reliably distinguish between areas at the most deprived end of the distribution, but not at the least deprived end. Differences between less deprived areas in the country are therefore less well defined than those between areas at the more deprived end of the distribution.

## SECTION 4: Neighbourhood level results by Domain

### Overview of findings for England

- ❖ Just over 5.3 million people live in the most deprived areas in England (ie most deprived 10%), including 3.2 million children and 900,000 older people.
- ❖ Across England as a whole, the majority (83%) of neighbourhoods that are the most deprived according to the 2015 Index of Multiple Deprivation were also the most deprived according to the 2010 Index.
- ❖ Middlesbrough, Knowsley, Kingston upon Hull, Liverpool and Manchester are the local authorities with the highest proportions of neighbourhoods among the most deprived in England.

### Overview of findings for Bristol

4.1 Figure 5 summarises the range of ranks and the median rank for each of the ten measures of deprivation in Bristol. The diagram enables the easy comparison of the types of deprivation in Bristol. It clearly illustrates that some domains of deprivation affect Bristol more than others, for example Crime mainly appears in the higher ranks whilst Education, Skills & Training Deprivation has both very high ranks (most deprived) and very low ranks (least deprived).

4.2 Also shown is the median rank for each measure. This is the middle rank and is a better measure than the average rank which can be distorted by extreme values. Again this clearly illustrates the domains that have the most deprivation in Bristol relative to each other, with Crime experiencing the highest median rank and Barriers to Housing and Services the lowest. Please note that it is important to remember when looking at this chart that each domain has been allocated a different weight in terms of its overall contribution to Multiple Deprivation (see Figure 1).

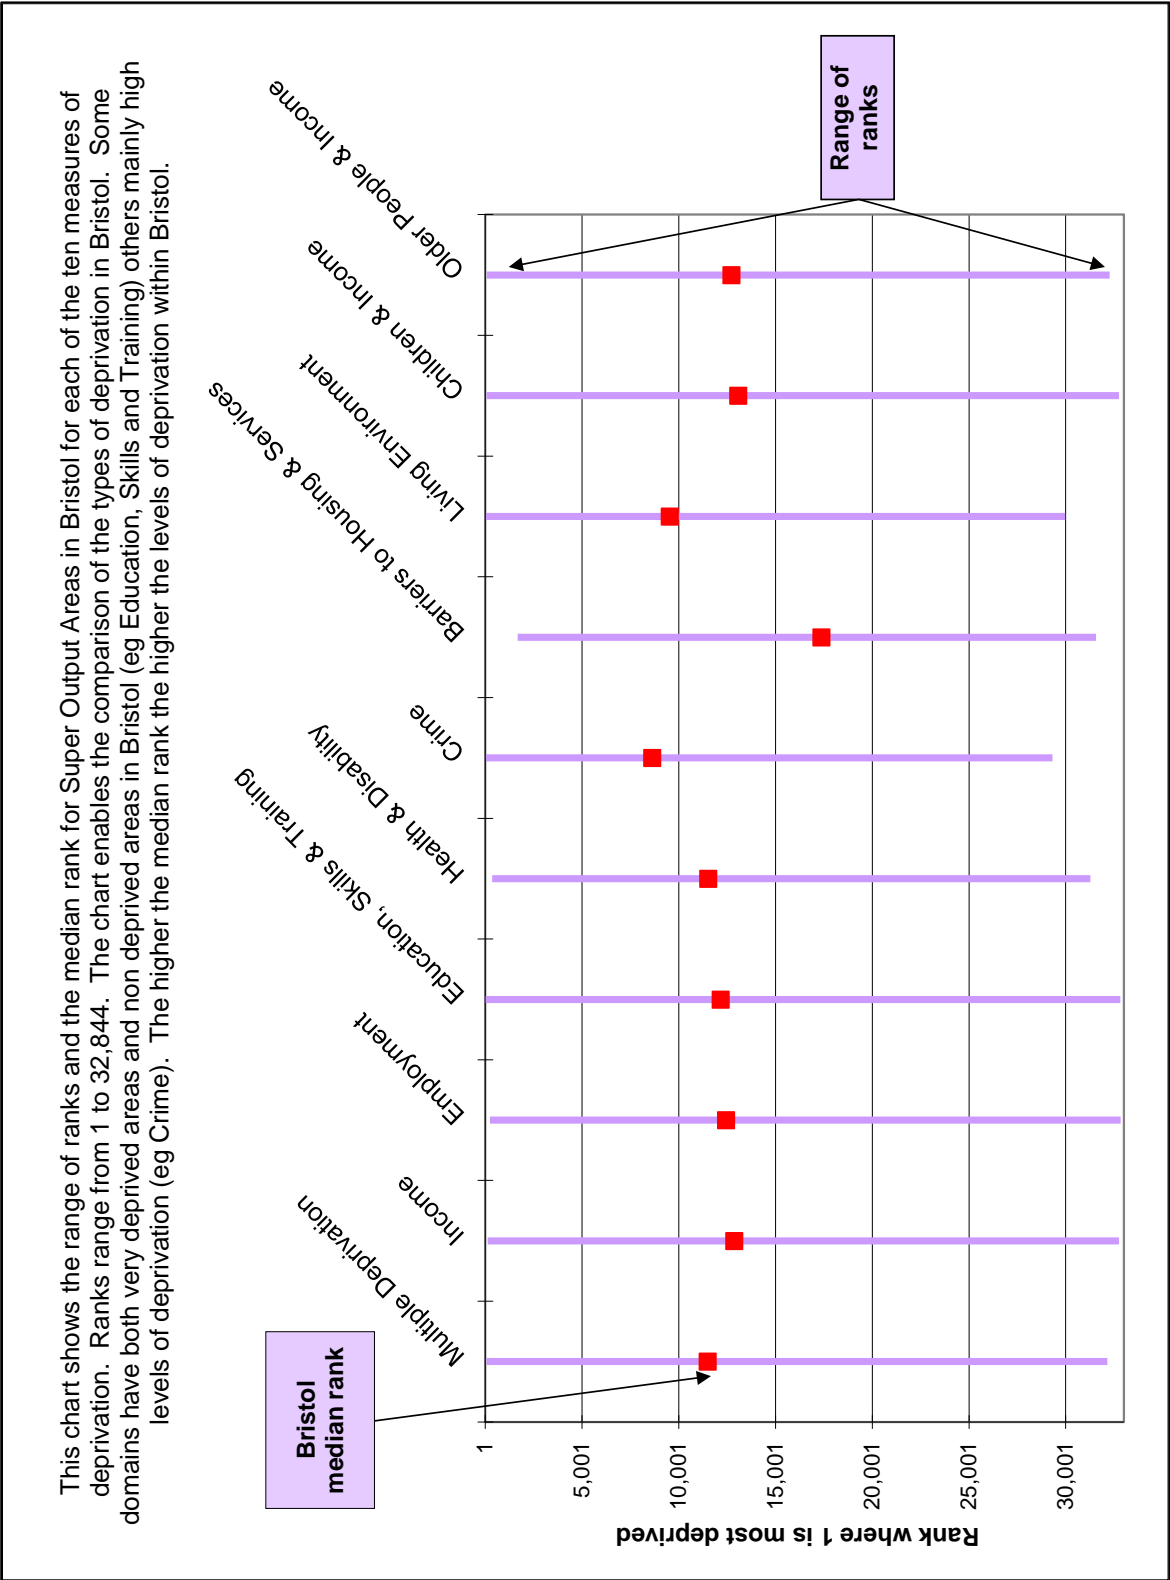

### A. Multiple Deprivation in Bristol

- ❖ The Indices of Deprivation 2015 reinforce previously identified patterns of deprivation across the city. Bristol continues to have deprivation 'hot spots' that are amongst some of the most deprived areas in the country yet are adjacent to some of the least deprived areas in the country.
- ❖ In Bristol 16% of residents - 69,000 people - live in the most deprived areas in England (ie most deprived 10%), including 17,800 children and 10,500 older people.
- ❖ Bristol has 42 LSOAs in the most deprived 10% in England for Multiple Deprivation. Of these 42 LSOAs, there are 26 in the most deprived 5% and 6 in the most deprived 1% (see Map 1, Map 3 and Figure 7).
- ❖ Of the 42 LSOAs in the most deprived 10% in England for Multiple Deprivation, 20 are in South Bristol, 12 in Central Bristol, 7 in North Bristol and 3 in East Bristol<sup>1</sup>.

---

<sup>1</sup> Area definitions: Central – Cabot, Lawrence Hill and Ashley wards; East – Easton, Eastville, Frome Vale, Hillfields, St George East and West wards; North – Avonmouth, Bishopston, Clifton, Clifton East, Cotham,

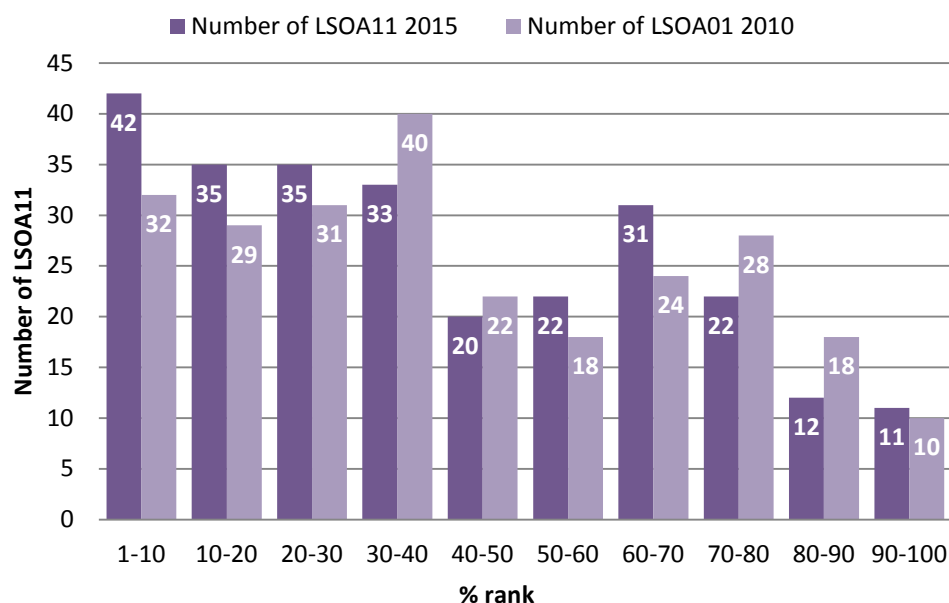

Figure 5: Comparison of ranks for each measure of Deprivation in Bristol

Henbury, Henleaze, Horfield, Kingsweston, Lockleaze, Redland, Southmead, Soke Bishop, and Westbury-on-Trym; South – all wards south of the river.

- ❖ The greatest levels of deprivation in Bristol are in Whitchurch Park, Hartcliffe, Filwood and Lawrence Hill. 'Bishopport Avenue' (E01032514) and 'Hareclive' (E01014726) both in Whitchurch Park ward are ranked in the most deprived one hundred areas in England in 2015 for Multiple Deprivation.

**Figure 6: Multiple Deprivation 2010 and 2015 - Distribution of Bristol's LSOAs by national decile**

Note: In Bristol there were 252 LSOAs in 2010 and 263 LSOAs in 2015 so direct like for like comparisons cannot be made

### Change in relative deprivation between 2010 and 2015

4.3 When exploring changes in deprivation between the Indices of Deprivation 2015 and previous versions of the indices, users should be aware that changes can only be described in relative terms, ie.the extent to which an area has changed rank or decile of deprivation. They cannot be used to identify real change in deprivation over time.

4.4 For example, an area can be said to have become more deprived relative to other areas if it was within the most deprived 20% of areas nationally according to the 2010 Index of Multiple Deprivation but within the most deprived 10% according to the 2015 Index. However, it would not necessarily be correct to state that the level of deprivation in the area has increased on some absolute scale, as it may be the case that all areas had improved, but that this area had improved more slowly than other areas and so been 'overtaken' by those areas.

4.5 Local knowledge of an area is very important when interpreting the data, especially when understanding change. For example, knowing that a housing renewal scheme has taken place means that improvements to barriers to housing and services can more confidently be attributed to real change.

## Change in Bristol:

- ❖ A greater proportion of Bristol's population live in the most deprived areas in England in 2015 than in 2010 – 16% of Bristol's total population live in the most deprived areas compared to 14% in 2010 - an increase of two percentage points. 22% of Bristol's children live in the most deprived areas - an increase of three percentage points - and 14% of Bristol's older people live in the most deprived areas - an increase of 1.8 percentage points.
- ❖ Relative to other areas in England, Bristol has both more LSOAs in the most deprived 10% for Multiple Deprivation than in 2010 and also areas are ranked higher in terms of Multiple Deprivation relative to other areas than in 2010 (see Figure 6).
- ❖ Bristol has 42 LSOAs in the most deprived 10% in England for Multiple Deprivation – 25 of these fell in the most deprived 10% in 2010 with the same LSOA boundary, 6 of these were outside of the most deprived 10% in 2010 with no change in LSOA boundary and 11 of these were subject to a boundary change.

## Bristol areas new to the most deprived 10% for Multiple Deprivation

4.6 In Bristol in 2015 there are 9 areas new to the most deprived 10% of areas in England for Multiple Deprivation than in 2010. These are:

LSOA11 code	LSOA11 name	Ward	2010 rank/ 32,482	2015 rank/ 32,844
E01033370*	Redcliffe South	Lawrence Hill	n/a	1,072
E01032518*	East Hillfields	Hillfields	n/a	1,763
E01014584	Glyn Vale	Filwood	3,443	1,994
E01014497	Lawrence Weston West	Avonmouth	3,757	2,383
E01014574	Greenbank	Eastville	4,268	2,587
E01032515*	Whitchurch Park West	Whitchurch Park	n/a	2,999
E01014703	Burnbush Hill	Stockwood	4,607	3,014
E01014706	Burnbush	Stockwood	5,585	3,134
E01014729	Marksbury Road	Windmill Hill	3,756	3,223

*\* New or revised LSOA11 boundary*

4.7 Six of these LSOA11s appear in the most deprived 10% in 2015 but were not in the most deprived 10% in 2010. Three of these LSOA11s have been subject to boundary changes.

4.8 'Redcliffe South' (Lawrence Hill ward) and 'East Hillfields' (Hillfields ward) are new LSOA11s which now appear in the most deprived 10% of areas in England. The boundary changes to these areas now better reflect deprivation 'hot spots'.

4.9 'Whitchurch Park West' (Whitchurch Park ward) now falls within the most deprived 10% of areas in England unlike LSOA01 Whitchurch Park in 2010 which had a slightly different boundary.

## Bristol areas no longer in the most deprived 10% for Multiple Deprivation

4.10 'Filton Avenue North' (E01014659 in Lockleaze ward) is no longer in the most deprived 10% of areas for Multiple Deprivation. In 2010 it was ranked 1,848 in England, it is ranked 6,013 in 2015 and so now falls within the most deprived 20%. This area has been completely redeveloped and as a consequence deprivation levels have fallen.

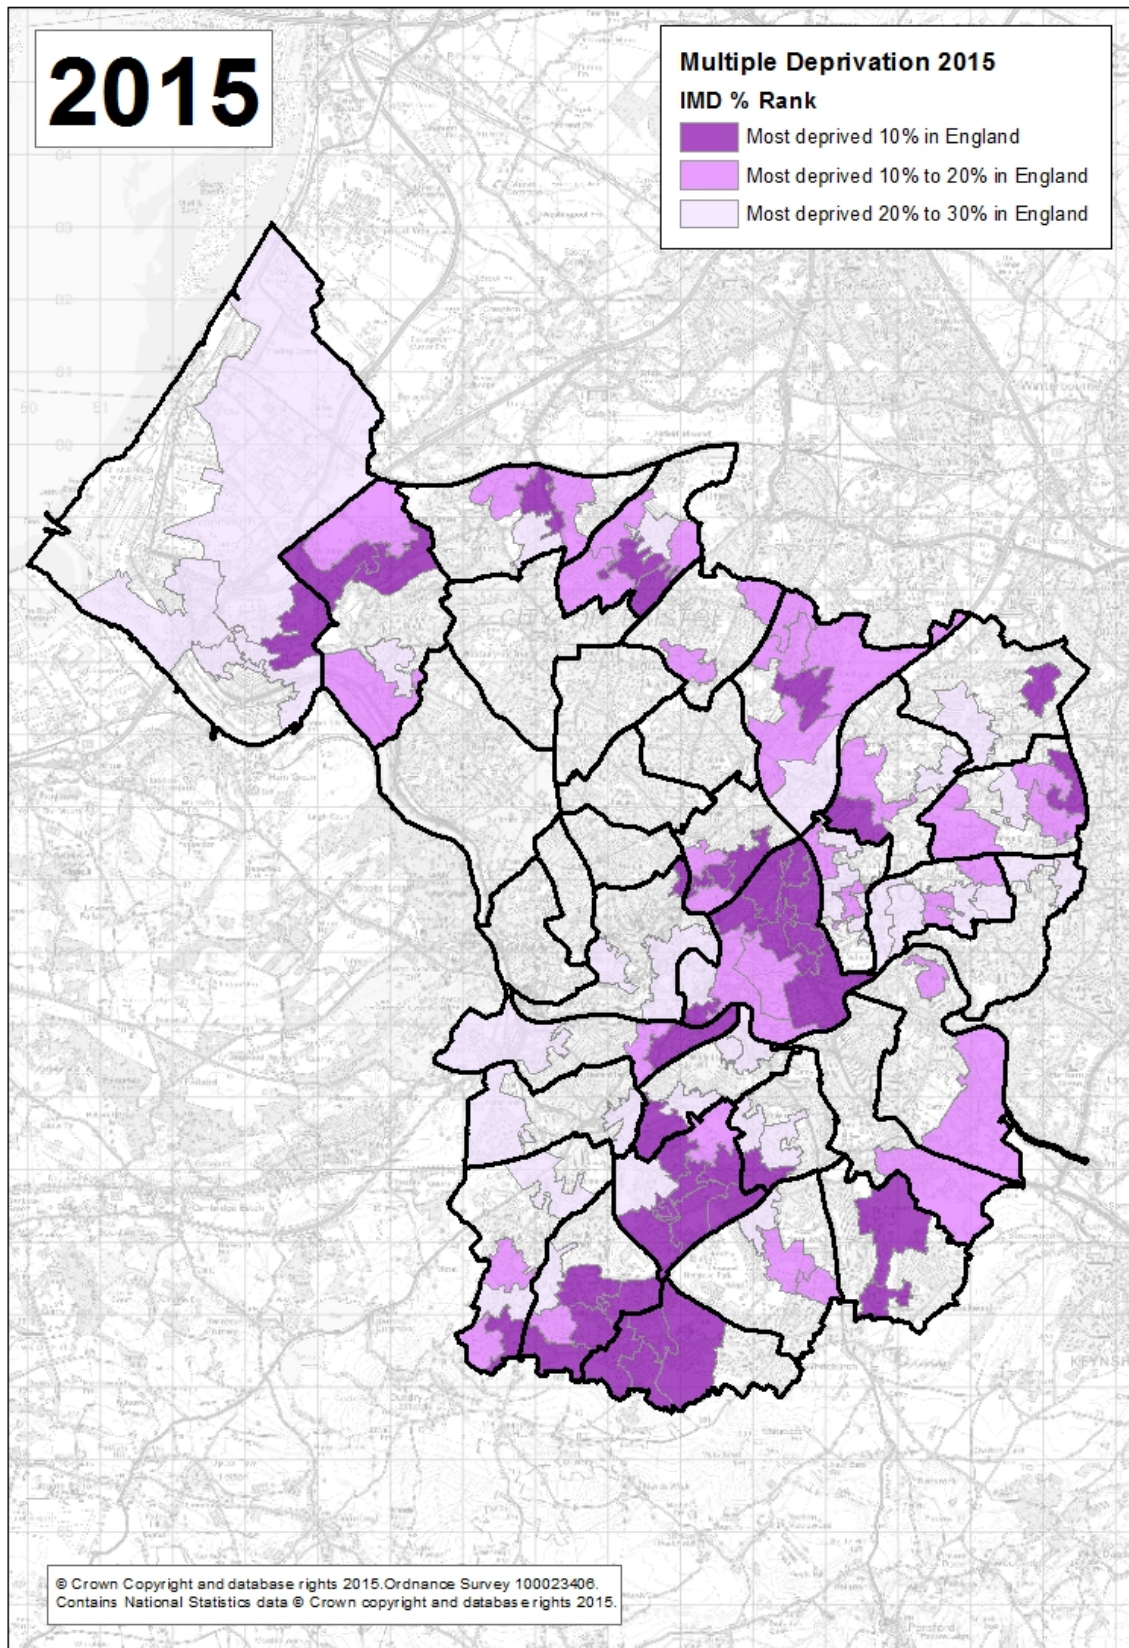

4.11 Due to changes in LSOA boundaries (ie the splitting of LSOA01 into several smaller LSOA11 due to increases in population) some new LSOA11s are no longer in the most deprived 10% in England for Multiple Deprivation. The boundaries changes have thus enabled the better identification of deprivation 'hot spots'.

4.12 The LSOA01s that are no longer wholly in the most deprived 10% for Multiple Deprivation in 2015 based on the new boundaries are:

Ward	LSOA code	LSOA01 name	2010 rank/ 32,482	2015 rank/ 32,844	% rank	Most deprived 10%
<b>Lawrence Hill</b>						
LSOA01	E01014656	Old Market and the Dings	1,046	n/a	3%	✓ 2010

## B. Income Deprivation

4.13 The Income Deprivation Domain measures the proportion of the population in an area experiencing deprivation relating to low income. The definition of low income used includes both those people that are out-of-work, and those that are in work but who have low earnings (and who satisfy the respective means tests). A combined count of income deprived individuals per Lower-layer Super Output Area is calculated by summing the following six non-overlapping indicators:

Indicators
Adults and children in Income Support families <sup>2</sup>
Adults and children in income-based Jobseeker's Allowance families
Adults and children in income-based Employment and Support Allowance families
Adults and children in Pension Credit (Guarantee) families
Adults and children in Working Tax Credit and Child Tax Credit families not already counted, that is those who are not in receipt of Income Support, income-based Jobseeker's Allowance, income-based Employment and Support Allowance or Pension Credit (Guarantee) and whose equivalised income (excluding housing benefit) is below 60 per cent of the median before housing costs
Asylum seekers in England in receipt of subsistence support, accommodation support, or both.

4.14 In addition, an Income Deprivation Affecting Children Index (IDACI) and an Income Deprivation Affecting Older People Index (IDOPI) were created, representing the proportion of children aged 0-15, and people aged 60 and over, respectively living in income deprived households. The results are presented below.

**Figure 8: Income Deprivation Percentage Rank by Decile**

<sup>2</sup> The word 'family' is used to designate a 'benefit unit', that is the claimant, any partner and any dependent children (those for whom Child Benefit is received).

## Key findings for Bristol

4.14 Figure 9 shows the number of people affected by income deprivation by ward.

- ❖ In Bristol as a whole almost 72,000 - 17% of the population - suffers from income deprivation. The proportion varies greatly across the city from as high as 49% of people living in 'Fulford Road North' in Hartcliffe ward to 1% of people living in 'University Halls' in Stoke Bishop.
- ❖ There are 37 LSOAs in the most income deprived 10% nationally, of these 17 are in South Bristol, 12 are in Central Bristol, 5 in North Bristol and 3 in East Bristol. In all these areas more than 30% of residents are income deprived.
- ❖ On a ward basis, more than a third of people are income deprived in Lawrence Hill (36%) and Filwood (35%).

## Change in relative deprivation between 2010 and 2015

4.15 The proportion of the total population living in Bristol in 2015 who are income deprived is similar to levels in 2010 – 16% of all people in 2010 and 17% of all people in 2015. At ward level, the greatest increase in the proportion of people who are income deprived was in Whitchurch Park, Hartcliffe and Stockwood wards – all of which increased by three percentage points or more.

*Note: Care should be taken when interpreting change over time due to changes to the data used to construct the indicators, including changes to eligibility criteria for certain benefits used to measure income deprivation and employment deprivation. On the whole the change relates to the time period 2008 to 2012.*

## C. Income Deprivation Affecting Children

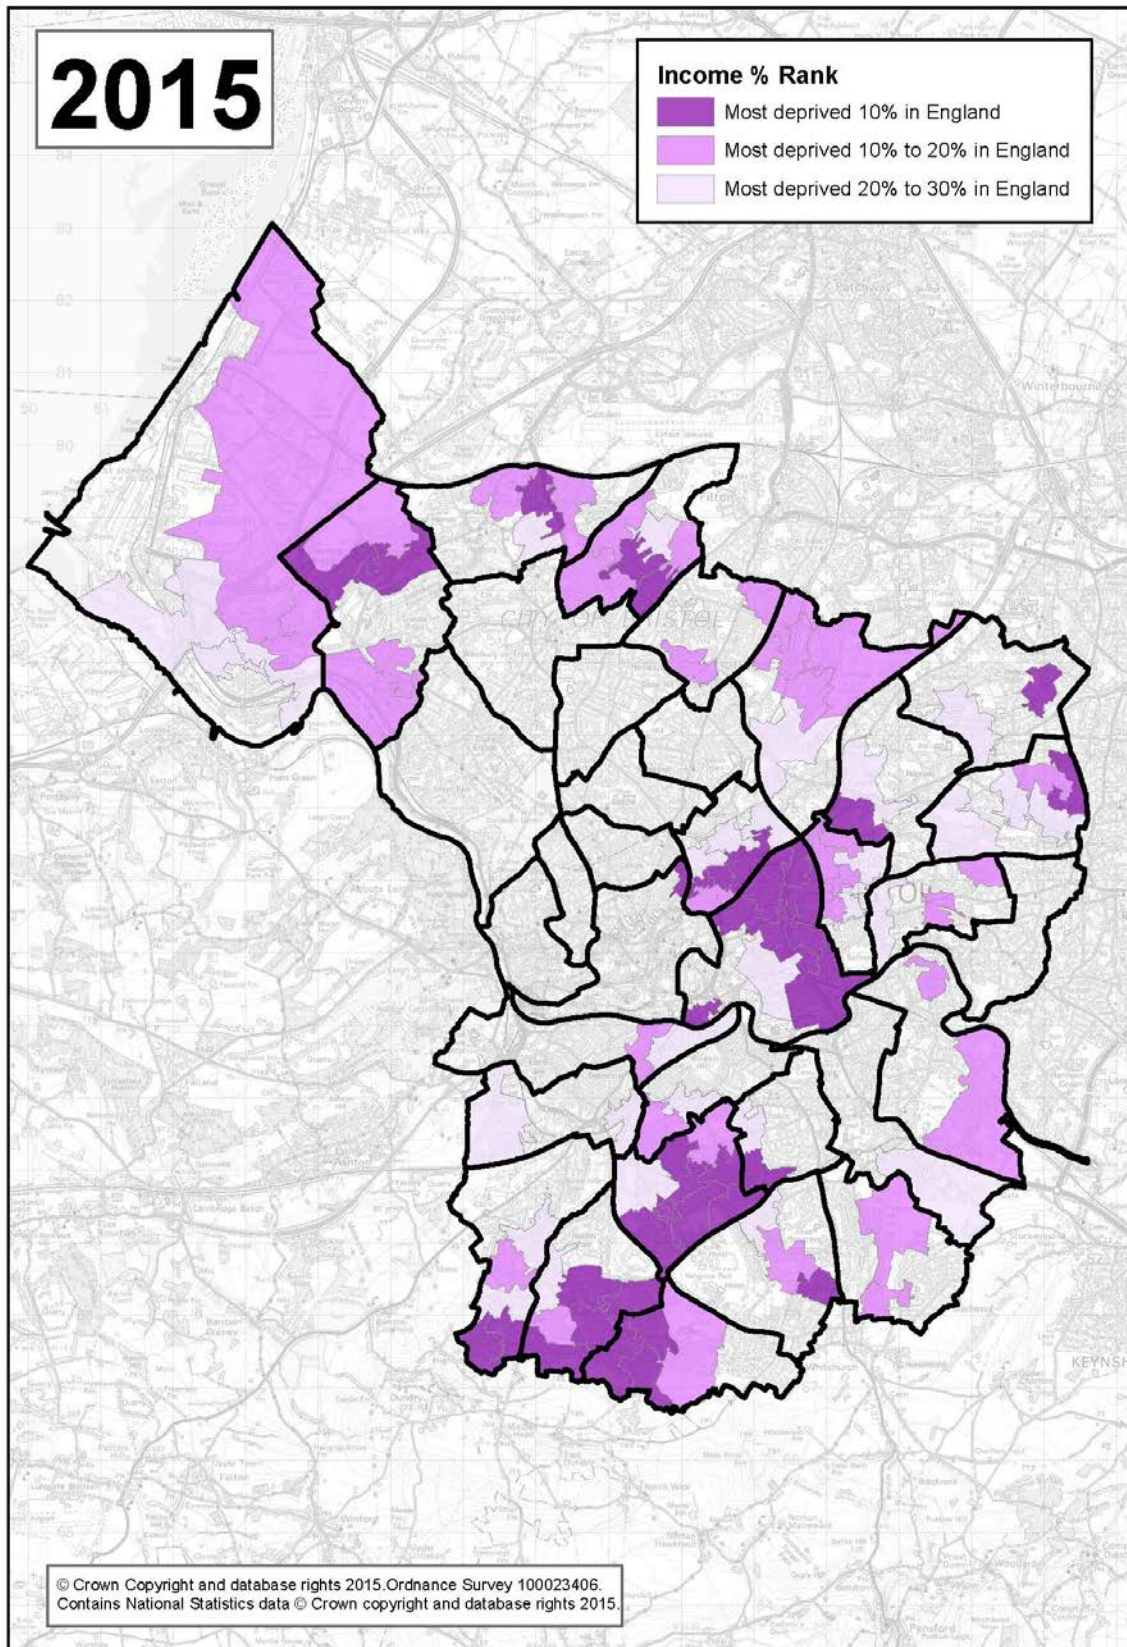

### Key findings for Bristol

4.16 Figure 9 shows the number of children affected by income deprivation by ward.

- ❖ In Bristol as a whole just over 19,700 children - 24% of all children – live in income deprived households. The proportion varies greatly across the city from as high as 65% of children living in 'Fulford Road North' in Hartcliffe ward to 1% of children living in 'Canford Park' in Westbury-on-Trym ward.
- ❖ 48 out of a total of 263 LSOAs in Bristol are in the most deprived 10% nationally for income deprivation affecting children.
- ❖ In 12 LSOAs more than half of the children live in income deprived households – 3 of these areas are in Hartcliffe, 3 in Whitchurch Park, 3 in Filwood, 2 in Lawrence Hill and 1 in Ashley ward.
- ❖ One LSOA 'Fulford Road North' in Hartcliffe ward falls in the most deprived 100 LSOAs in England for Income Deprivation Affecting Children - it is ranked 65<sup>th</sup> out of 32,844 areas nationally.
- ❖ On a ward basis, almost half of all children live in income deprived households in Lawrence Hill ward (46%), Filwood ward (45%), Whitchurch Park ward (43%) and Hartcliffe ward (42%).

Source: Department for Communities and Local Government, Indices of Deprivation 2015

## Map 6: Income Deprivation Affecting Older People 2015

Source: Department for Communities and Local Government, *Indices of Deprivation 2015*

## **Change in relative deprivation between 2010 and 2015**

4.17 The proportion of children living in Bristol who live in income deprived households has decreased slightly from 27% in 2010 to 24% in 2015.

4.18 At ward level, the majority of wards saw a drop in the proportion of children living in income deprived households. The largest decreases were in the inner city wards of Lawrence Hill (-12%), Easton (-10%) and Ashley (-9%), as well as in Lockleaze (-9%). The greatest increase in the proportion of children living in income deprived households was in Stockwood ward up from 17% to 22%.

*Note: Care should be taken when interpreting change over time due to changes to the data used to construct the indicators, including changes to eligibility criteria for certain benefits used to measure income deprivation and employment deprivation. On the whole the change relates to the time period 2008 to 2012.*

## **D. Income Deprivation Affecting Older People**

### **Key findings for Bristol**

4.19 Figure 9 shows the number of older people affected by income deprivation by ward.

- ❖ In Bristol as a whole just over 15,000 older people - 20% of all older people - live in income deprived households. The proportion varies greatly across the city from as high as 69% of older people living in 'St Pauls Grosvenor Road' in Ashley ward to 3% of older people living in 'Whitchurch' in Whitchurch Park ward.
- ❖ 30 out of a total of 263 LSOAs in Bristol are in the most deprived 10% nationally for income deprivation affecting older people. Almost half of these areas (13 LSOAs) are within Ashley or Lawrence Hill wards. Within the Lawrence Hill ward, all LSOAs are within the most deprived 10% nationally with the exception of 'Redcliffe North'.
- ❖ There are 9 LSOAs where more than half of the older people living there are income deprived - 4 of these areas are in Lawrence Hill, 3 in Ashley, 1 in Cabot and 1 in Southville ward.
- ❖ One LSOA 'St Pauls Grosvenor Road' in Ashley ward falls in the most deprived 100 LSOAs in England for Income Deprivation Affecting Older People - it is ranked 78<sup>th</sup> out of 32,844 areas nationally. The number of older people in this area is however quite small with just 97 people aged 60 and over but 70 of whom are affected by income deprivation.
- ❖ On a ward basis, almost half of older people in Lawrence Hill (48%) are income deprived and more than a third of all older people in Filwood (35%) and Ashley ward (35%).

## **Change in relative deprivation between 2010 and 2015**

4.20 The proportion of older people living in Bristol who are affected by income deprivation has decreased slightly from 22% in 2010 to 20% in 2015.

4.21 At ward level, the majority of wards saw a drop in the proportion of older people affected by income deprivation. The largest decreases were in Clifton and Bishopston wards all with a drop of more than four percentage points between 2010 and 2015. The only wards which saw a small increase in the proportion of older people affected by income deprivation were Lawrence Hill (+3%), Ashley (+2%) and Clifton East (+2%).

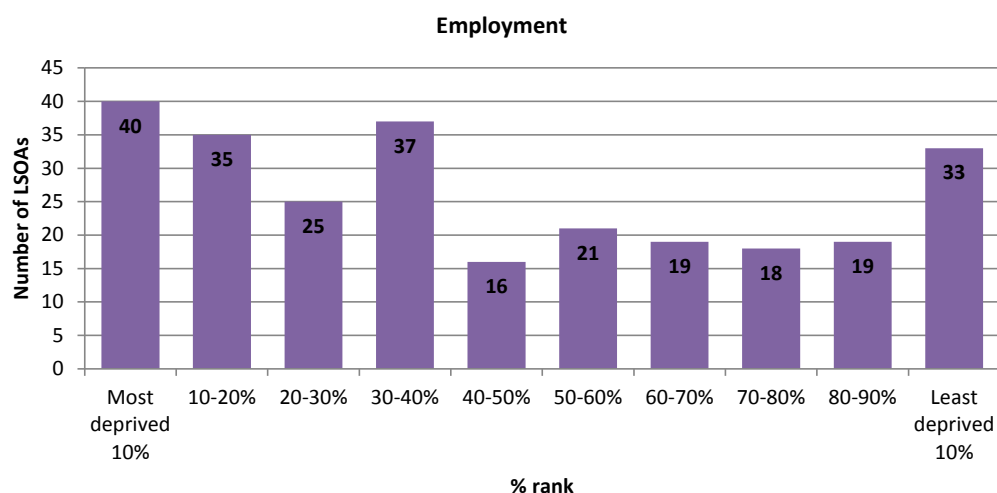

*Note: Care should be taken when interpreting change over time due to changes to the data used to construct the indicators, including changes to eligibility criteria for certain benefits used to measure income deprivation and employment deprivation. On the whole the change relates to the time period 2008 to 2012.*

## E. Employment Deprivation

4.22 The Employment Deprivation Domain measures the proportion of the working age population in an area involuntarily excluded from the labour market. This includes people who would like to work but are unable to do so due to unemployment, sickness or disability, or caring responsibilities. A combined count of employment deprived individuals per LSOA is calculated by summing the following five non-overlapping indicators:

Indicators
Claimants of Jobseeker's Allowance (both contribution-based and income-based), women aged 18 to 59 and men aged 18 to 64
Claimants of Employment and Support Allowance, women aged 18 to 59 and men aged 18 to 64
Claimants of Incapacity Benefit, women aged 18 to 59 and men aged 18 to 64
Claimants of Severe Disablement Allowance, women aged 18 to 59 and men aged 18 to 64
Claimants of Carer's Allowance, women aged 18 to 59 and men aged 18 to 64.

**Figure 10: Employment Deprivation Percentage Rank by Decile**

### Key findings for Bristol

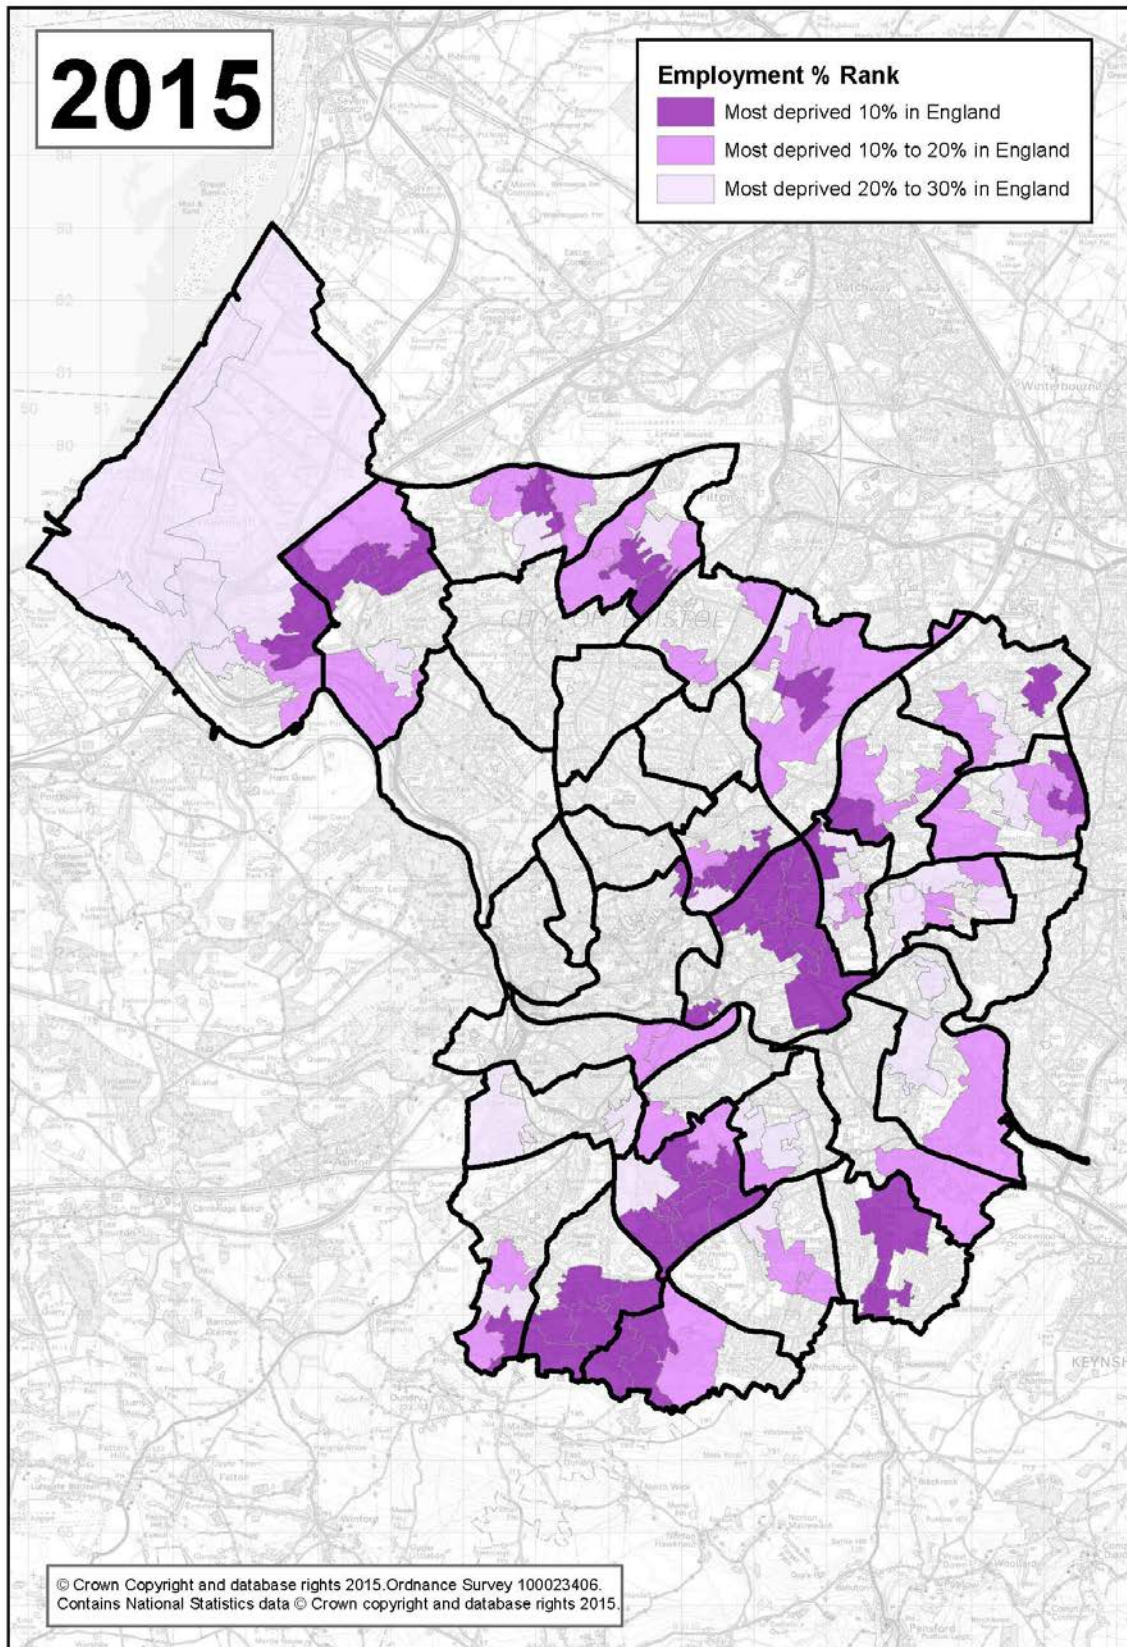

4.23 Figure 11 shows the number of people affected by employment deprivation by ward.

- ❖ In Bristol as a whole almost 36,000 people (ie 13% of the working age population) experience employment deprivation, although the proportion varies greatly across the city from as high as 37% in 'Hareclive' in Whitchurch Park to less than 1% in other areas of the city.

## Map 7: Employment Deprivation 2015

E05002006	Windmill Hill	1,115	12%	11%
<b>Bristol</b>		<b>35,850</b>	<b>13%</b>	<b>11%</b>

- ❖ There are 40 LSOAs in the most deprived 10% nationally, of these 17 are in South Bristol, 12 are in Central Bristol, 7 in North Bristol and 4 in East Bristol. In all these areas more than a fifth of working age residents are employment deprived.
- ❖ On a ward basis, more than a quarter of the working age population are employment deprived in Filwood ward (1,745 people, 26%) and Lawrence Hill ward (3,240 people, 25%).

### Change in relative deprivation between 2010 and 2015

4.24 The proportion of the population living in Bristol who are employment deprived has increased from 11% of the working age population in 2010 to 13% of the working age population in 2015.

4.25 At the ward level, nearly all wards saw an increase in the proportion of the working age population who are employment deprived. In both 2010 and 2015 Lawrence Hill and Filwood wards had the highest levels of employment deprivation in Bristol. The greatest increases in the proportion employment deprived have been in Whitchurch Park (+6%), Hartcliffe (+5%), Filwood (+5%), Eastville (+5%) and Southmead (+4%).

*Note: Care should be taken when interpreting change over time due to changes to the data used to construct the indicators, including changes to eligibility criteria for certain benefits used to measure income deprivation and employment deprivation. On the whole the change relates to the time period 2008 to 2012.*

## F. Education, Skills and Training Deprivation

4.26 The Education, Skills and Training Domain measures the lack of attainment and skills in the local population. The indicators fall into two sub-domains: one relating to children and young people and one relating to adult skills. These two sub-domains are designed to reflect the 'flow' and 'stock' of educational disadvantage within an area respectively. That is, the 'children and young people' sub-domain measures the attainment of qualifications and associated measures ('flow'), while the 'skills' sub-domain measures the lack of qualifications in the resident working age adult population ('stock').

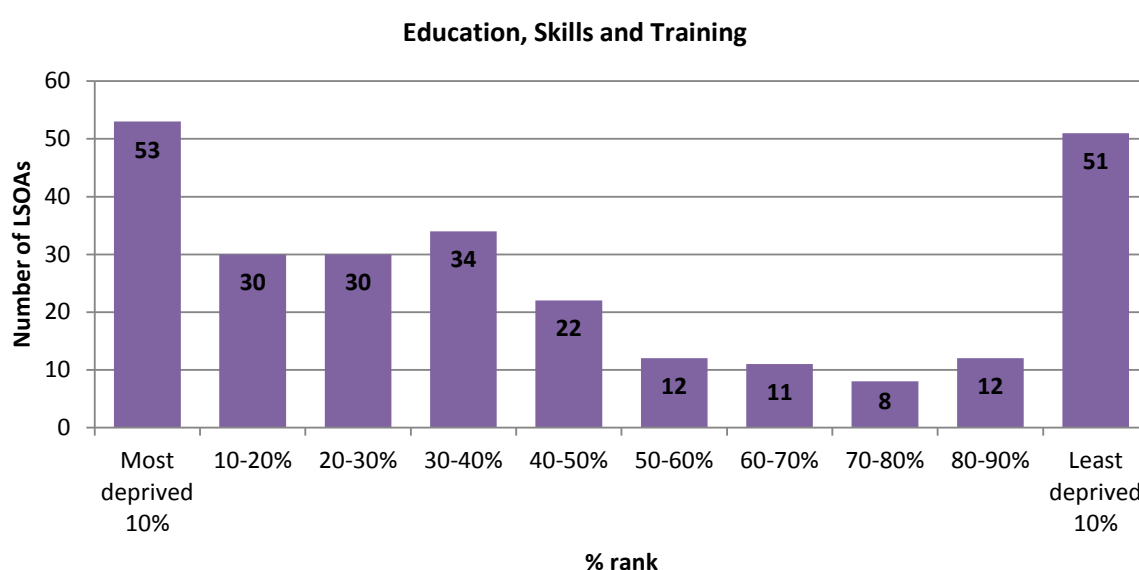

Indicators
<b>Children and Young People sub-domain</b>
Key Stage 2 attainment: The average points score of pupils taking reading, writing and mathematics Key Stage 2 exams
Key Stage 4 attainment: The average capped points score of pupils taking Key Stage 4
Secondary school absence: The proportion of authorised and unauthorised absences from secondary school
Staying on in education post 16: The proportion of young people not staying on in school or non-advanced education above age 16
Entry to higher education: A measure of young people aged under 21 not entering higher education.
<b>Adult Skills sub-domain</b>
Adult skills: The proportion of working age adults with no or low qualifications, women aged 25 to 59 and men aged 25 to 64
English language proficiency: The proportion of working age adults who cannot speak English or cannot speak English well, women aged 25 to 59 and men aged 25 to 64.

## Key findings for Bristol

4.27 The Education, Skills and Training Domain is where Bristol experiences some of the highest levels of deprivation. The distribution of deprivation based on this domain is more far reaching than other domains and is particularly concentrated in the social housing areas in South Bristol.

- ❖ More than 85,000 people live in areas of the city identified as in the most deprived 10% nationally for Education, Skills and Training deprivation.
- ❖ A fifth (53 out of 263) of LSOAs in Bristol are in the most deprived 10% nationally, for Education, Skills and Training deprivation. Of these more than half (28 LSOAs) are in South Bristol, 14 are in North Bristol, 7 are in Central Bristol and 4 in East Bristol.

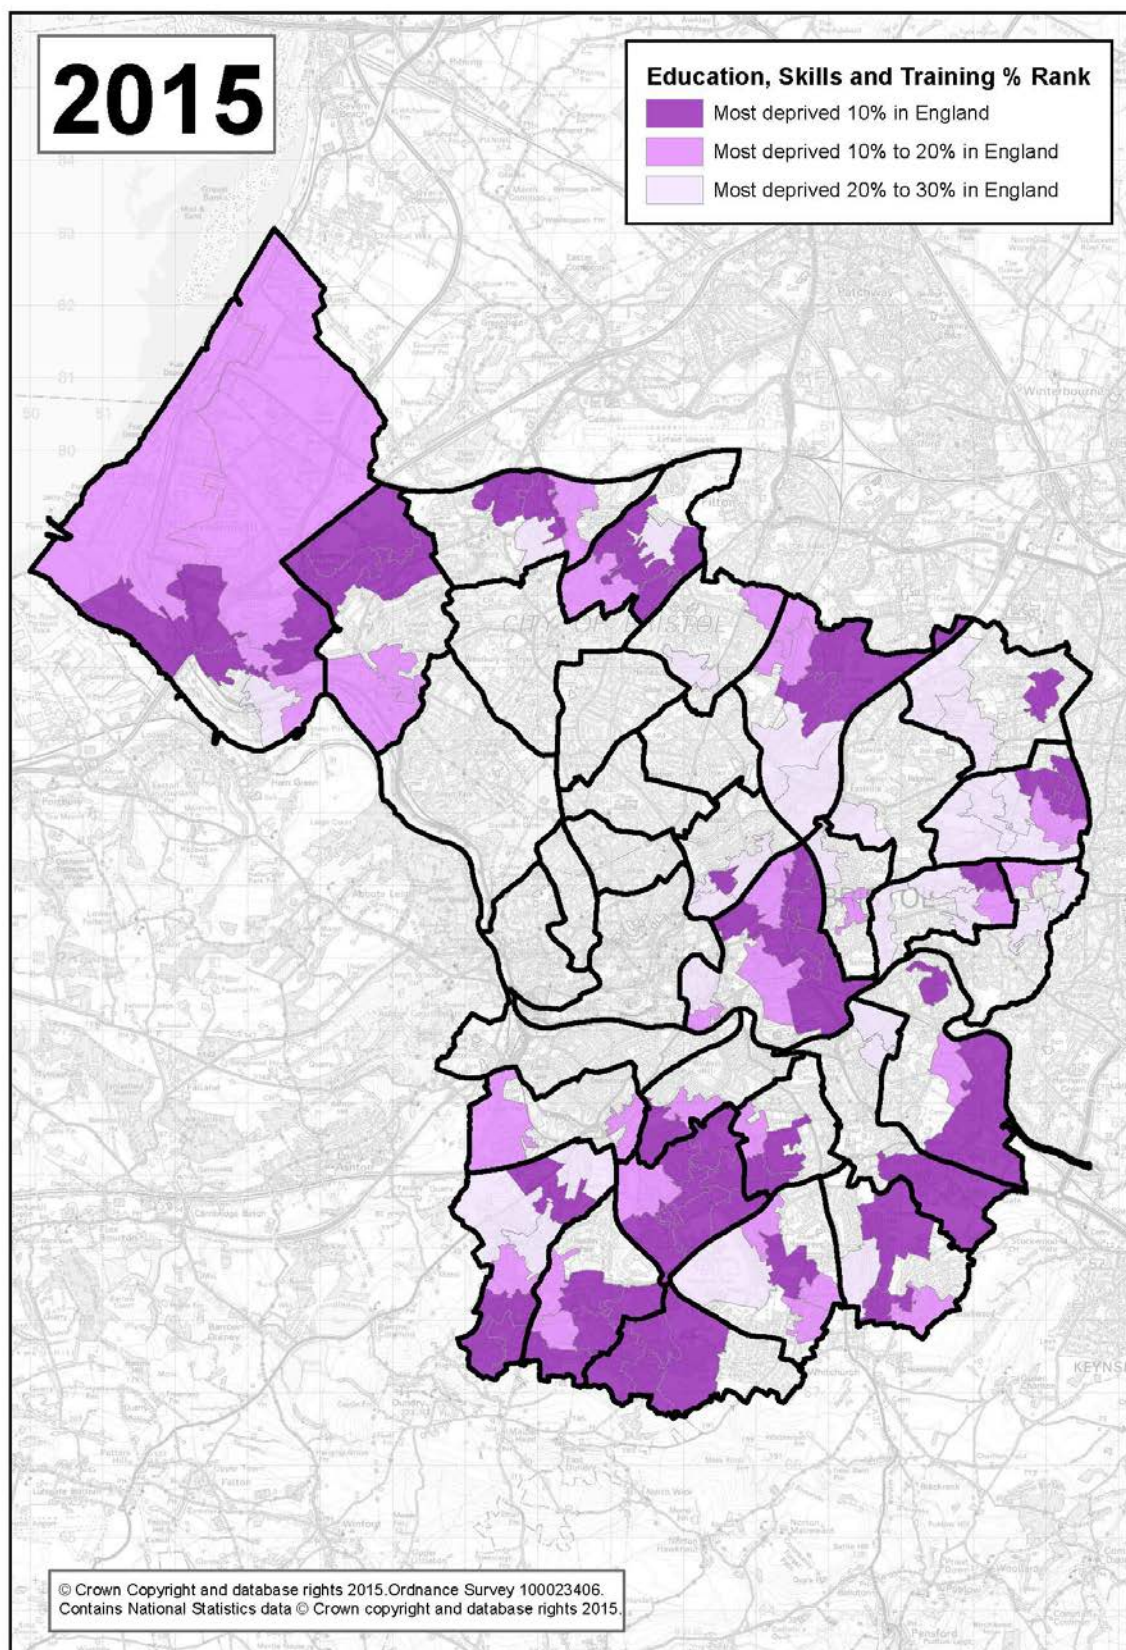

**Figure 12: Education, Skills and Training Deprivation Percentage Rank by Decile**

- ❖ South Bristol is particularly affected with extremes of Education, Skills and Training Deprivation. Five LSOAs in Filwood and Whitchurch Park wards are ranked in the most deprived 100 out of 32,844 LSOAs in England, including:
  - 'Bishopport Avenue East' in Whitchurch Park ward ranked 19<sup>th</sup> nationally
  - 'Throgmorton Road' in Filwood ward ranked 32<sup>nd</sup> nationally
  - 'Bishopport Avenue' in Whitchurch Park ward ranked 37<sup>th</sup> nationally
  - 'Ilminster Avenue West' in Filwood ward ranked 48<sup>th</sup> nationally
  - 'Hareclive' in Whitchurch Park ward ranked 87<sup>th</sup> nationally
- ❖ Of the two sub-domains, the children/young people sub domain relating to lack of attainment among children and young people is more significant in terms of deprivation in Bristol than the skills sub domain.
- ❖ 70 LSOAs fall within the most deprived 10% nationally for the Children and Young People's sub-domain. The areas are distributed across North, East and South Bristol. One LSOA is ranked in the most deprived 100 LSOAs – this is 'Bishopport Avenue East' in Whitchurch Park which is ranked 99 out of 32,844 areas nationally.

## Map 8: Education, Skills and Training Deprivation 2015

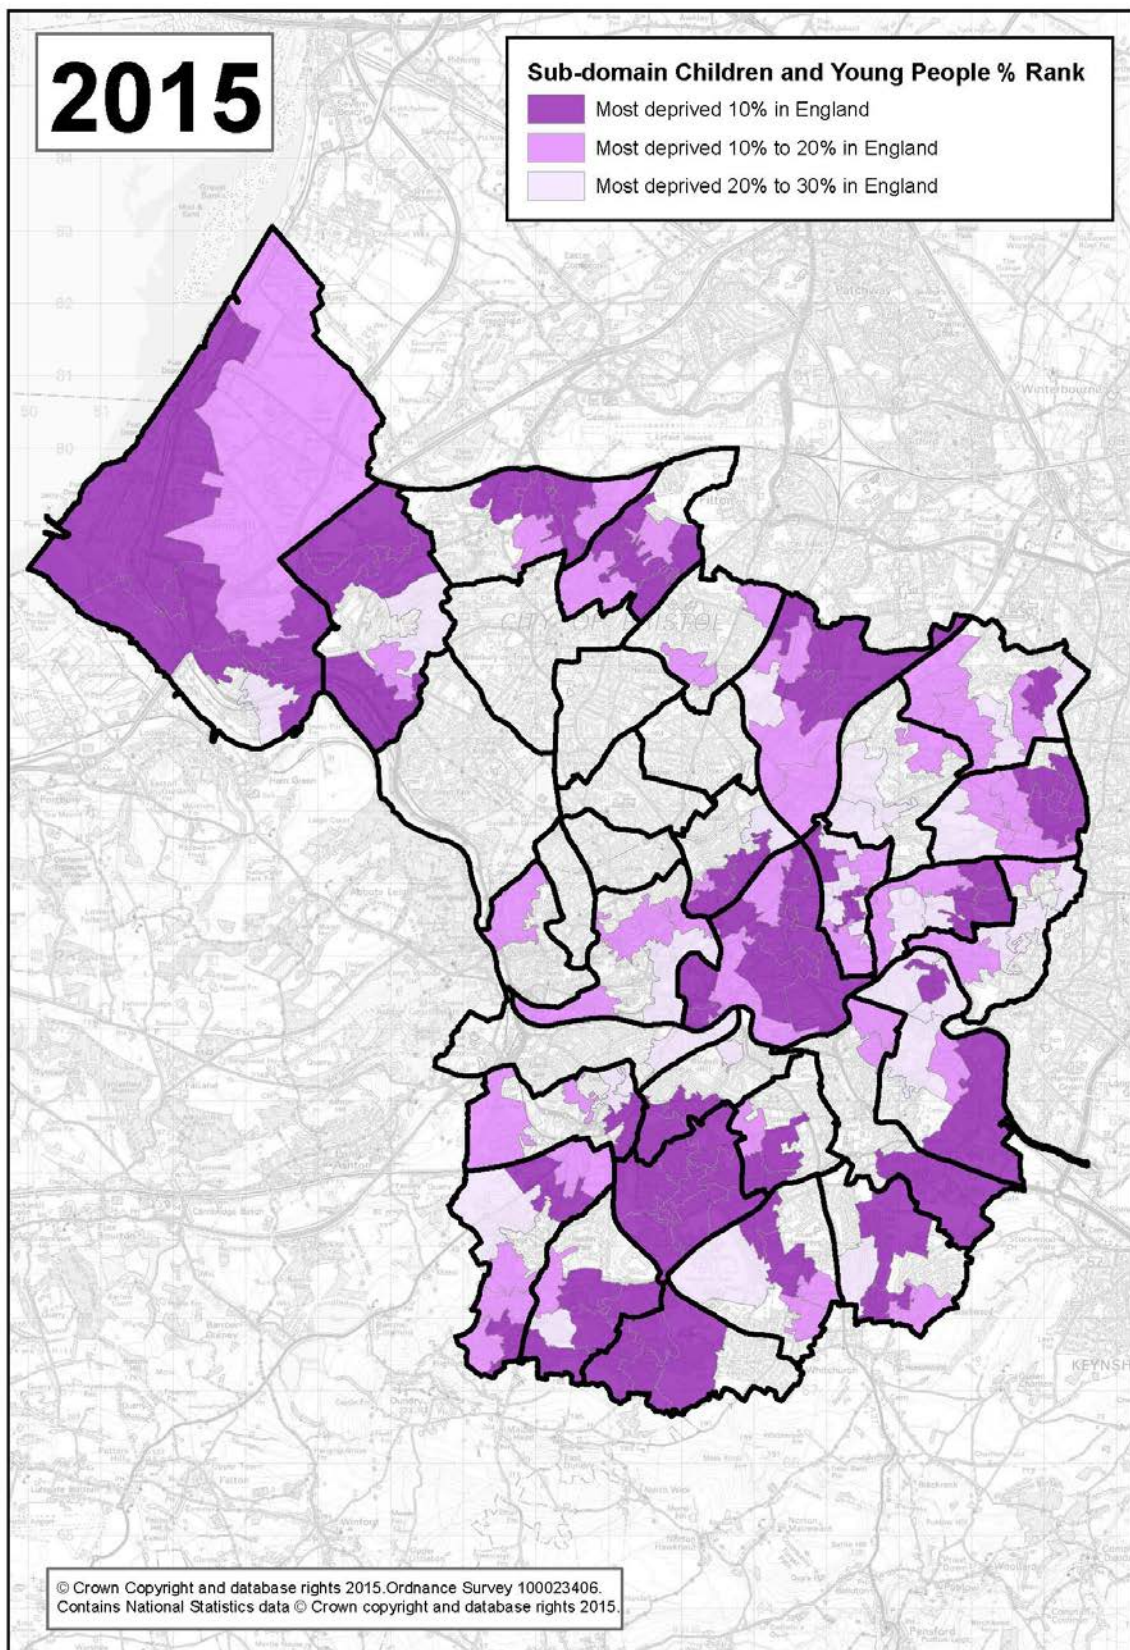

Source: Department for Communities and Local Government, Indices of Deprivation 2015

## Map 9: Children and Young People's Sub Domain 2015

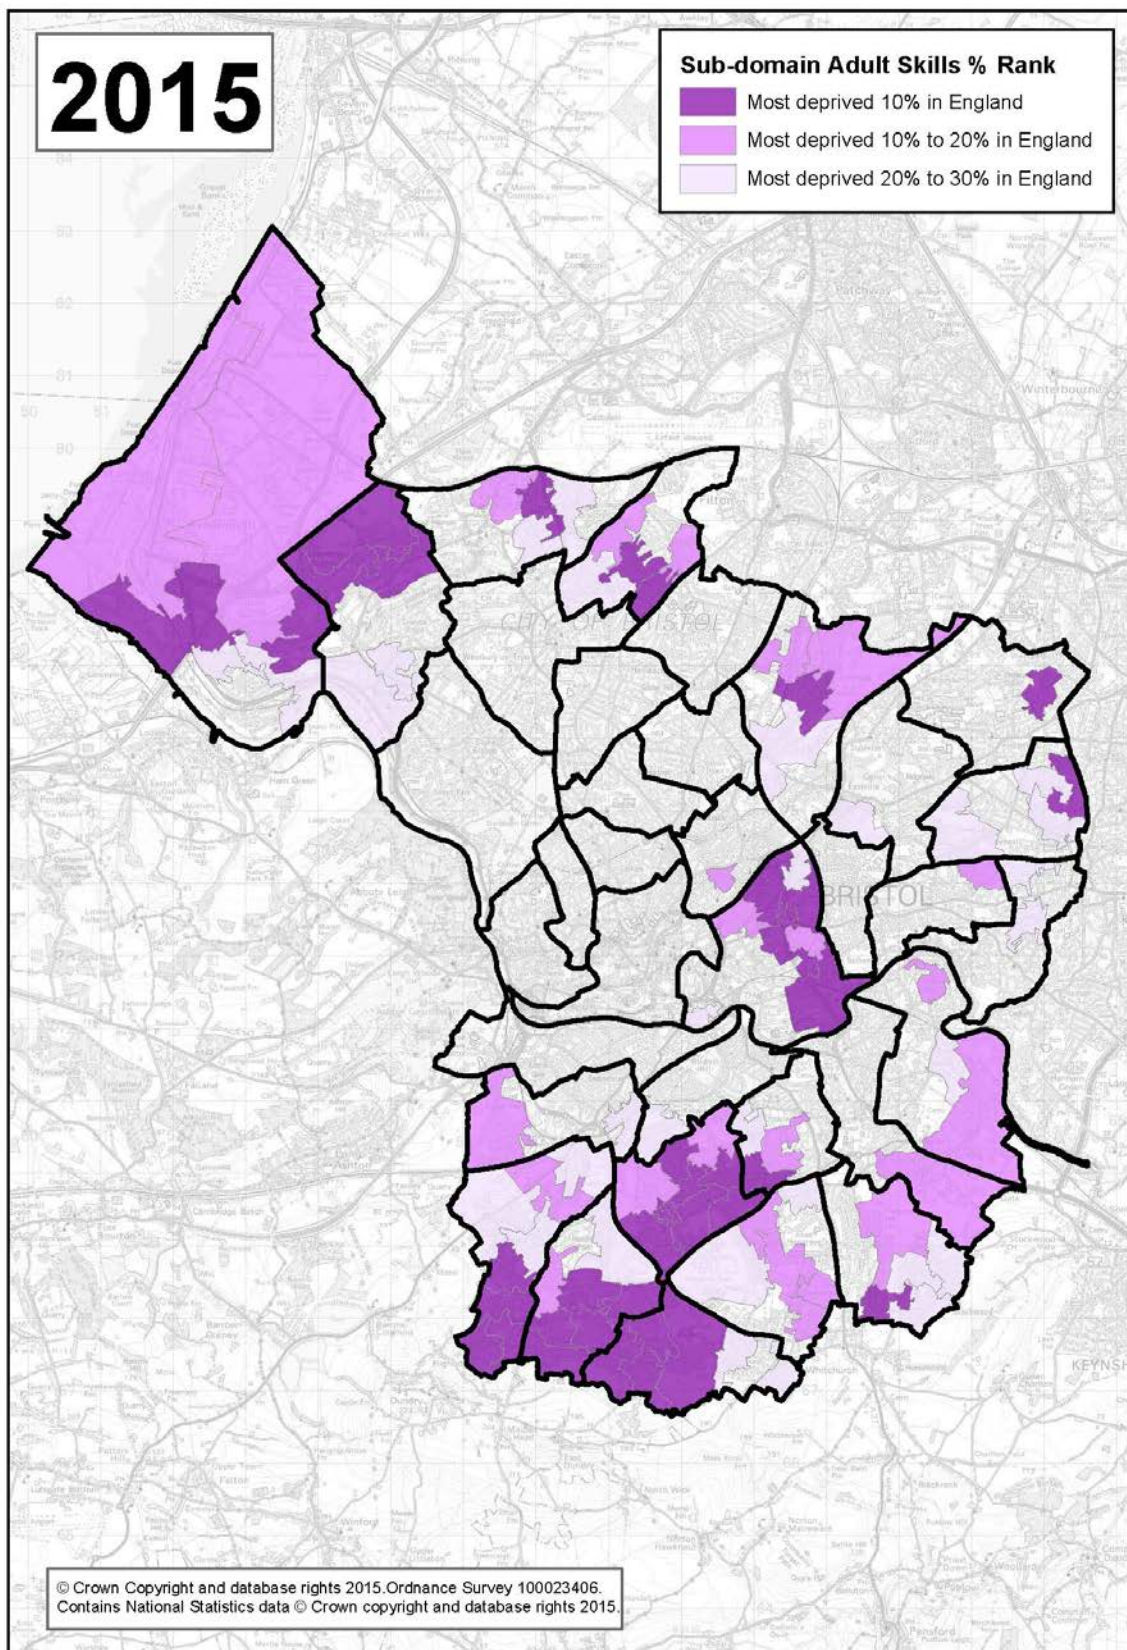

Source: Department for Communities and Local Government, Indices of Deprivation 2015

## Map 10: Skills Sub Domain 2015

Source: Department for Communities and Local Government, Indices of Deprivation 2015

- ❖ 36 LSOAs fall within the most deprived 10% nationally for the Skills sub-domain. Four LSOAs in Filwood and Whitchurch Park wards are ranked in the most deprived 100 out of 32,844 LSOAs in England for Skills Deprivation, including:

‘Hareclive’ in Whitchurch Park ward ranked 26<sup>th</sup> nationally  
‘Bishport Avenue East’ in Whitchurch Park ward ranked 73<sup>rd</sup> nationally  
‘Throgmorton Road’ in Filwood ward ranked 80<sup>th</sup> nationally  
‘Bishport Avenue’ in Whitchurch Park ward ranked 93<sup>rd</sup> nationally

## Change in relative deprivation between 2010 and 2015

4.28 Bristol has similar numbers of LSOAs in the most deprived 10% nationally in 2015 as in 2010 however, looking at the individual sub-domains there is a mixed picture.

4.29 For the Children and Young People’s sub-domain in 2015 just one area fell within the most deprived 100 areas nationally, an improvement relative to others areas nationally on 2010 when 6 areas fell in the most deprived 100 areas nationally.

4.30 For the Skills sub-domain more LSOAs in Bristol fell within the most deprived 10% nationally in 2015 than in 2010. Of these 4 areas are now in the most deprived 100 areas nationally, whereas there were no areas in the most deprived 100 in 2010.

## G. Health Deprivation and Disability

4.31 The Health Deprivation and Disability Domain measures the risk of premature death and the impairment of quality of life through poor physical or mental health. The domain measures morbidity, disability and premature mortality but not aspects of behaviour or environment that may be predictive of future health deprivation.

Indicators
Years of potential life lost: An age and sex standardised measure of premature death
Comparative illness and disability ratio: An age & sex standardised morbidity/disability ratio
Acute morbidity: An age and sex standardised rate of emergency admission to hospital
Mood and anxiety disorders: A composite based on the rate of adults suffering from mood and anxiety disorders, hospital episodes data, suicide mortality data and health benefits data.

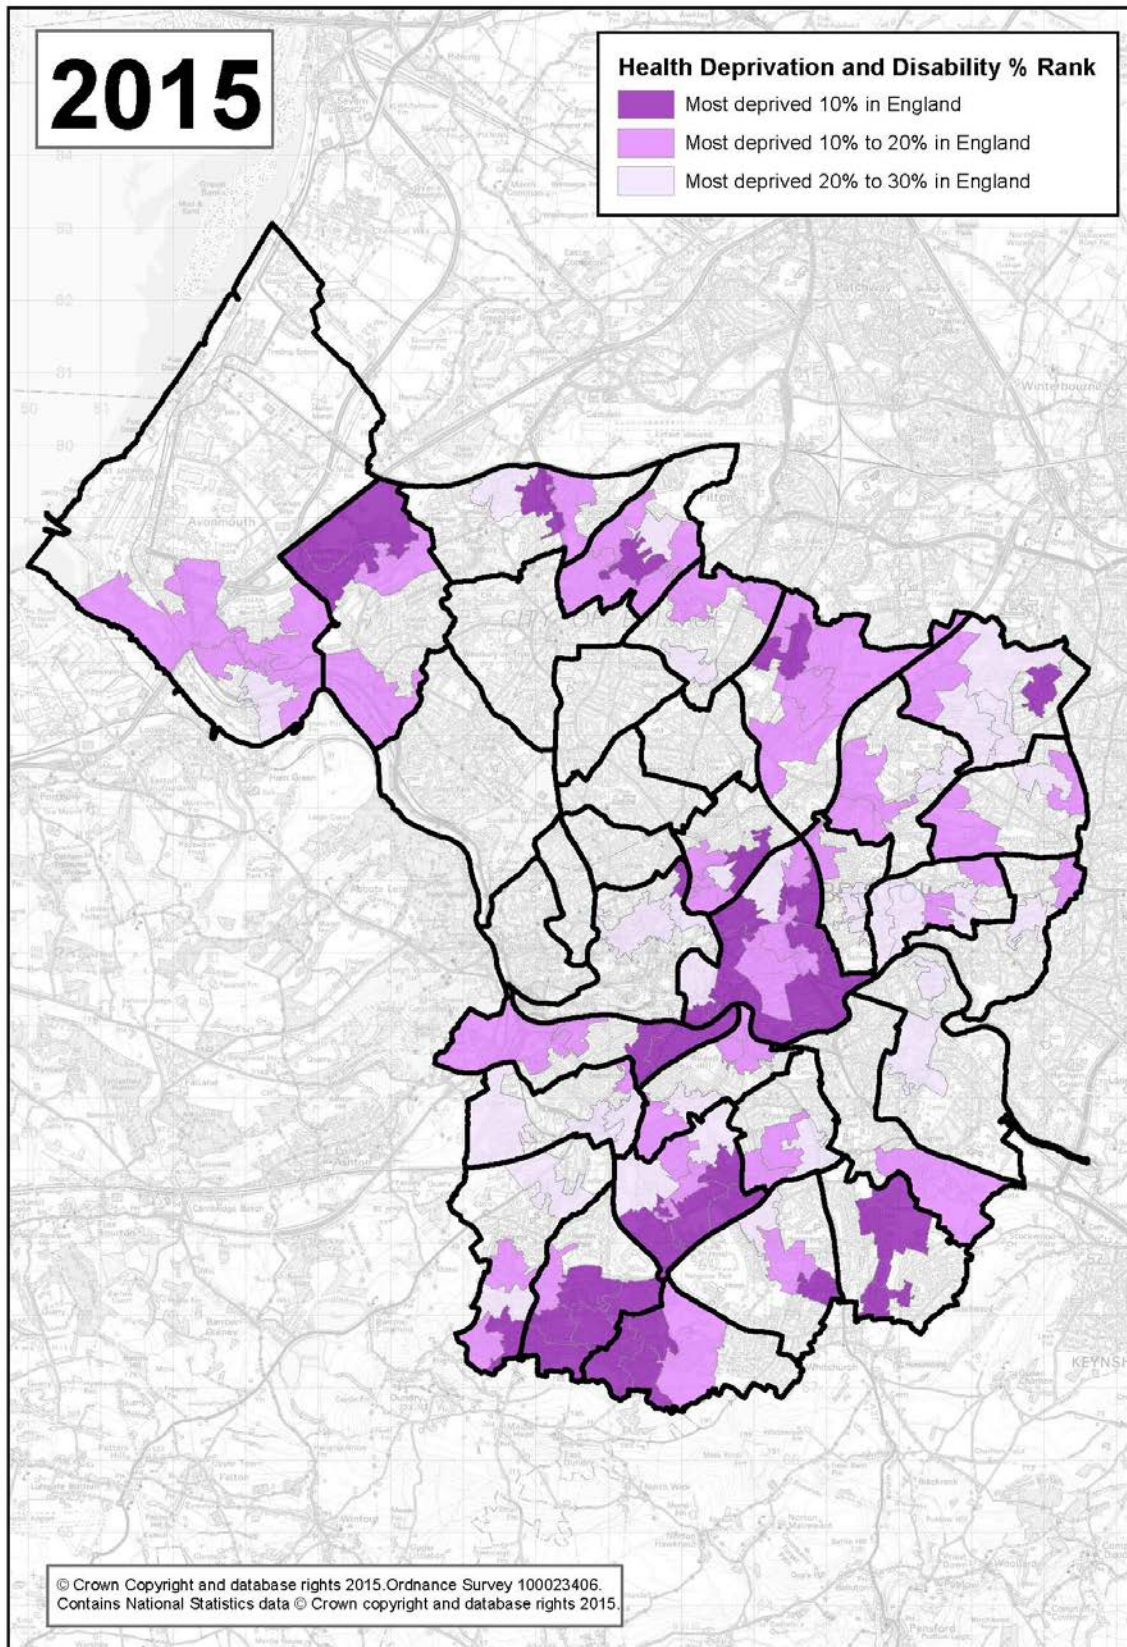

## Key findings for Bristol

4.32 Health Deprivation and Disability shows a similar pattern across Bristol as the other domains of deprivation.

- ❖ More than 51,000 people live in areas of the city identified as in the most deprived 10% nationally for Health Deprivation and Disability.
- ❖ 32 out of a total of 263 LSOAs in Bristol are in the most deprived 10% nationally. Of these more than half (18 in total) are in South Bristol, 8 in Central Bristol, 5 in North Bristol and 1 in East Bristol.

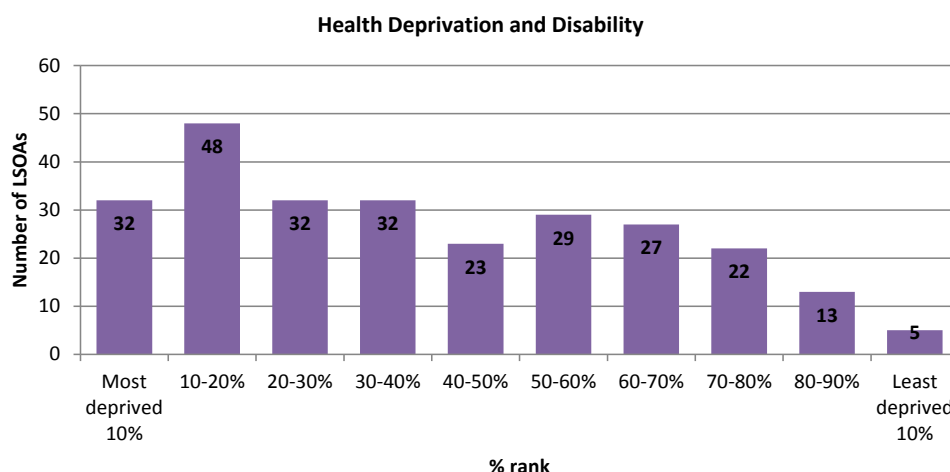

# Map 11: Health Deprivation and Disability 2015

Source: Department for Communities and Local Government, Indices of Deprivation 2015

- ❖ Six areas, all within South Bristol, fall within the most deprived 2% of areas nationally for Health Deprivation and Disability including 'Bedminster East' (rank 362) and 'Bedminster West' (rank 392) in Southville ward, 'Bishopport Avenue' (rank 398) in Whitchurch Park ward, 'Burnbush' (rank 522) in Stockwood and 'Inns Court' (rank 592) and 'Filwood Broadway' (rank 634) in Filwood ward.

**Figure 13: Health Deprivation and Disability Percentage Rank by Decile**

### Change in relative deprivation between 2010 and 2015

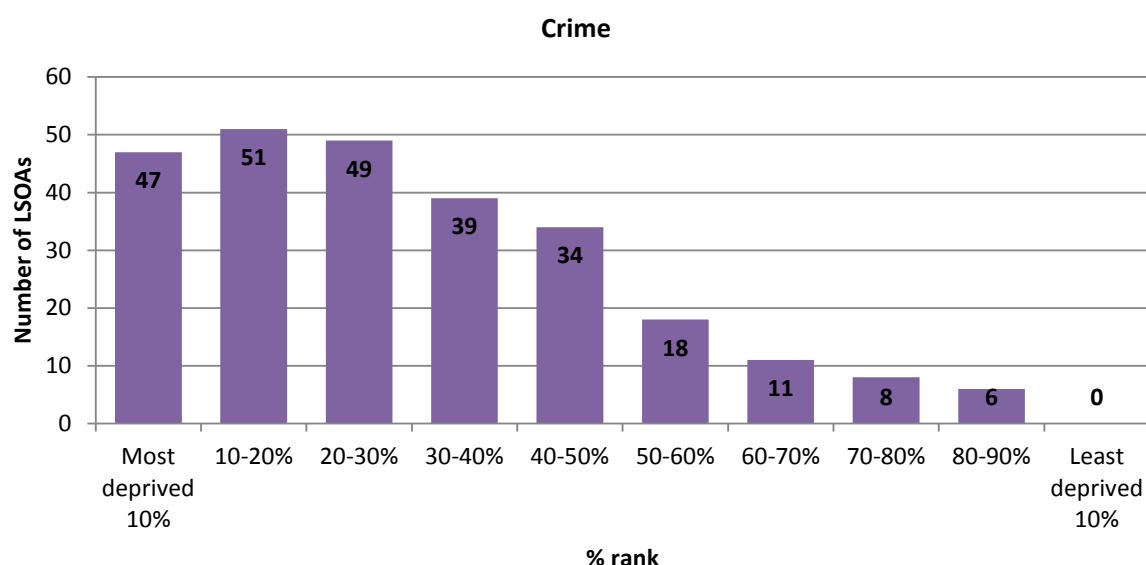

4.33 Bristol has more LSOAs in the most deprived 10% nationally for Health Deprivation and Disability in 2015 than in 2010 - in 2010 there were 19 areas out of a total of 252 areas in the most deprived 10% nationally compared to 32 areas out of 363 in 2015.

## H. Crime

Crime is an important feature of deprivation that has major effects on individuals and communities. The Crime Domain measures the risk of personal and material victimisation at local level.

Indicators
Violence – number of reported violent crimes (18 reported crime types) per 1000 at risk population
Burglary – number of reported burglaries (4 reported crime types) per 1000 at risk population
Theft – number of reported thefts (5 reported crime types) per 1000 at risk population
Criminal damage – number of reported crimes (8 reported crime types) per 1000 at risk population.

**Figure 14: Crime Deprivation Percentage Rank by Decile**

### Key findings for Bristol

4.34 Crime, in comparison to other domains, is where Bristol experiences some of the highest levels of deprivation. Since 2010 however, levels of Crime deprivation are much improved with a much lower proportion of the city falling within the most deprived 10% nationally.

- ❖ Almost 82,000 people live in areas of the city identified as in the most deprived 10% nationally for Crime deprivation.
- ❖ 47 out of a total of 263 LSOAs in Bristol are in the most deprived 10% nationally. Of these 16 are in South Bristol, 14 Central Bristol, 10 North Bristol and 7 in East Bristol.
- ❖ Two LSOAs in central Bristol are ranked in the most deprived 100 out of 32,844 LSOAs in England for Crime. These are:
  - 'Stokes Croft West' in Cabot ward ranked 40<sup>th</sup> nationally
  - 'St Pauls City Road' in Ashley ward ranked 42<sup>nd</sup> nationally
- ❖ Unlike other domains, there are no LSOAs in Bristol in the least deprived 10% nationally for Crime.

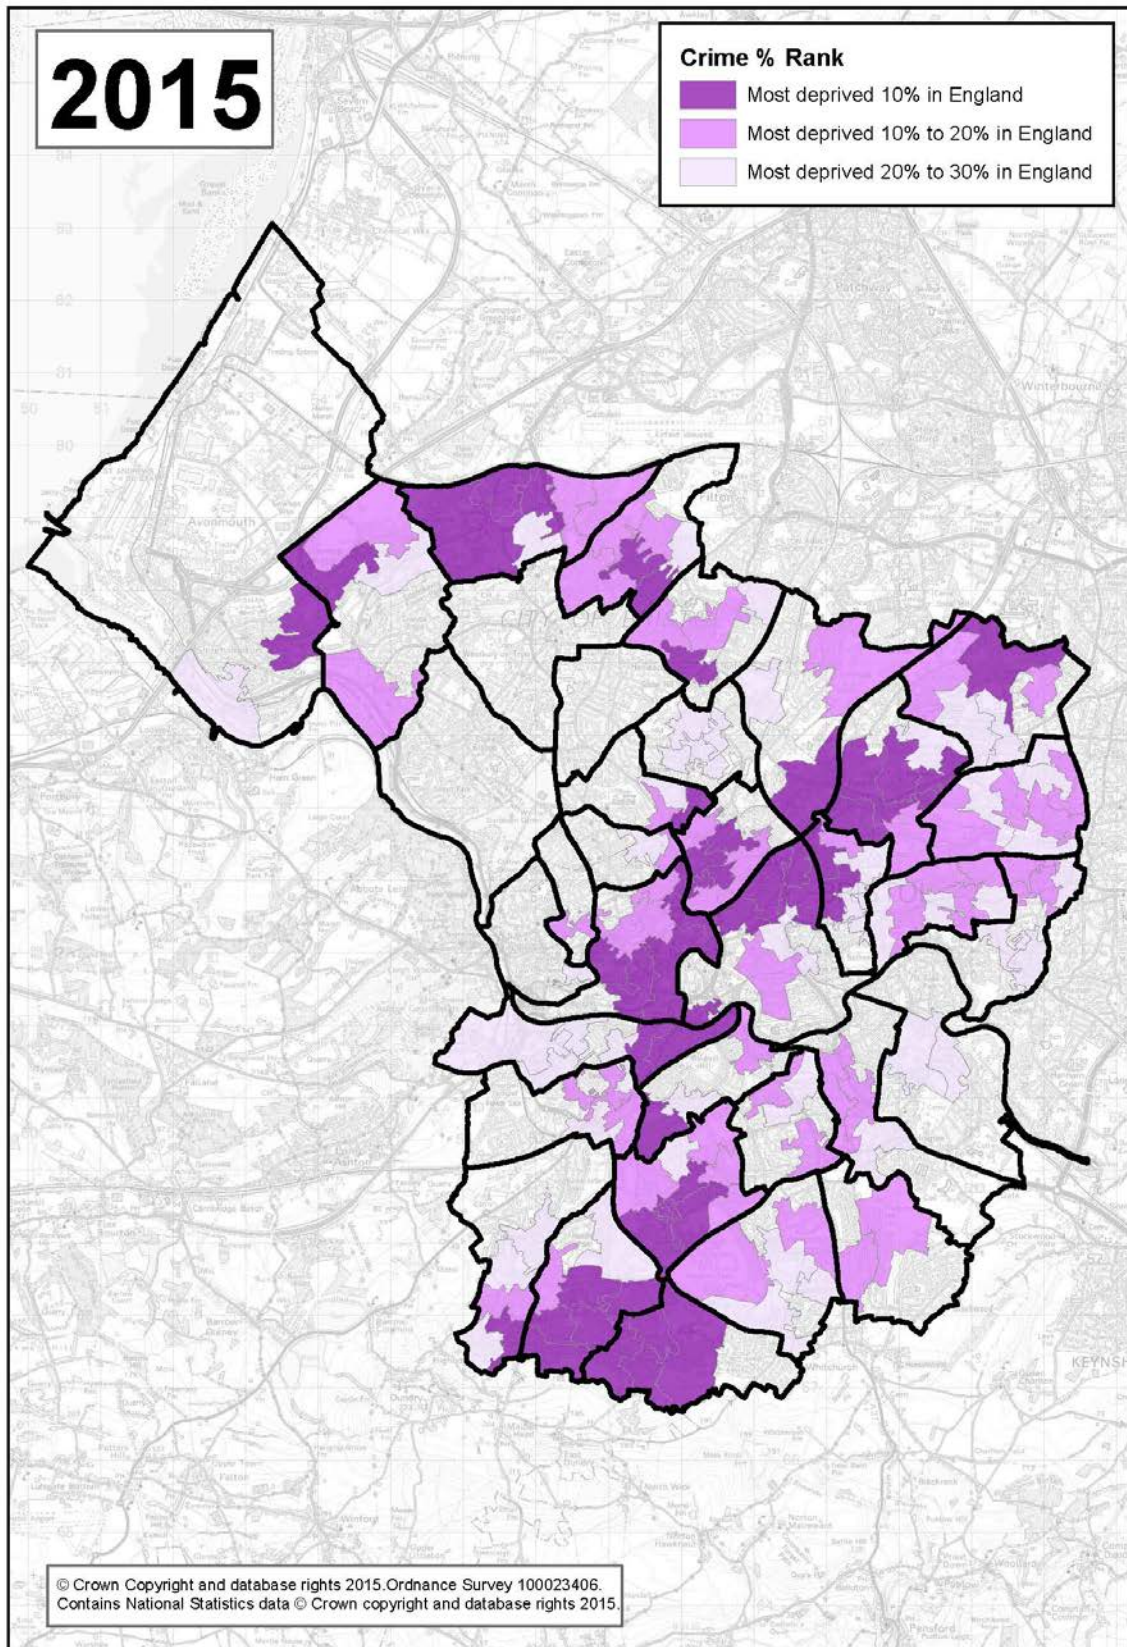

### Change in relative deprivation between 2010 and 2015

4.35 Since 2010, relative to other areas, the greatest improvement in Bristol has been in Crime deprivation with around half the number of LSOAs now in the most deprived 10% of areas in England.

# I. Barriers to Housing and Services

4.36 This domain measures the physical and financial accessibility of housing and key local services. The indicators fall into two sub-domains: 'geographical barriers', which relate to the physical proximity of local services, and 'wider barriers' which includes issues relating to access to housing such as affordability.

Indicators
<b>Geographical Barriers sub-domain</b>
Road distance to a post office
Road distance to a primary school
Road distance to a general store or supermarket
Road distance to a GP surgery
<b>Wider Barriers sub-domain</b>
Household overcrowding: The proportion of all households in a Lower-layer Super Output Area which are judged to have insufficient space to meet the household's needs
Homelessness: Local authority district level rate of acceptances for housing assistance under the homelessness provisions of the 1996 Housing Act, assigned to the constituent Lower-layer Super Output Areas
Housing affordability: Difficulty of access to owner-occupation or the private rental market, expressed as the inability to afford to enter owner occupation or the private rental market.

**Figure 15: Barriers to Housing and Services Percentage Rank by Decile**

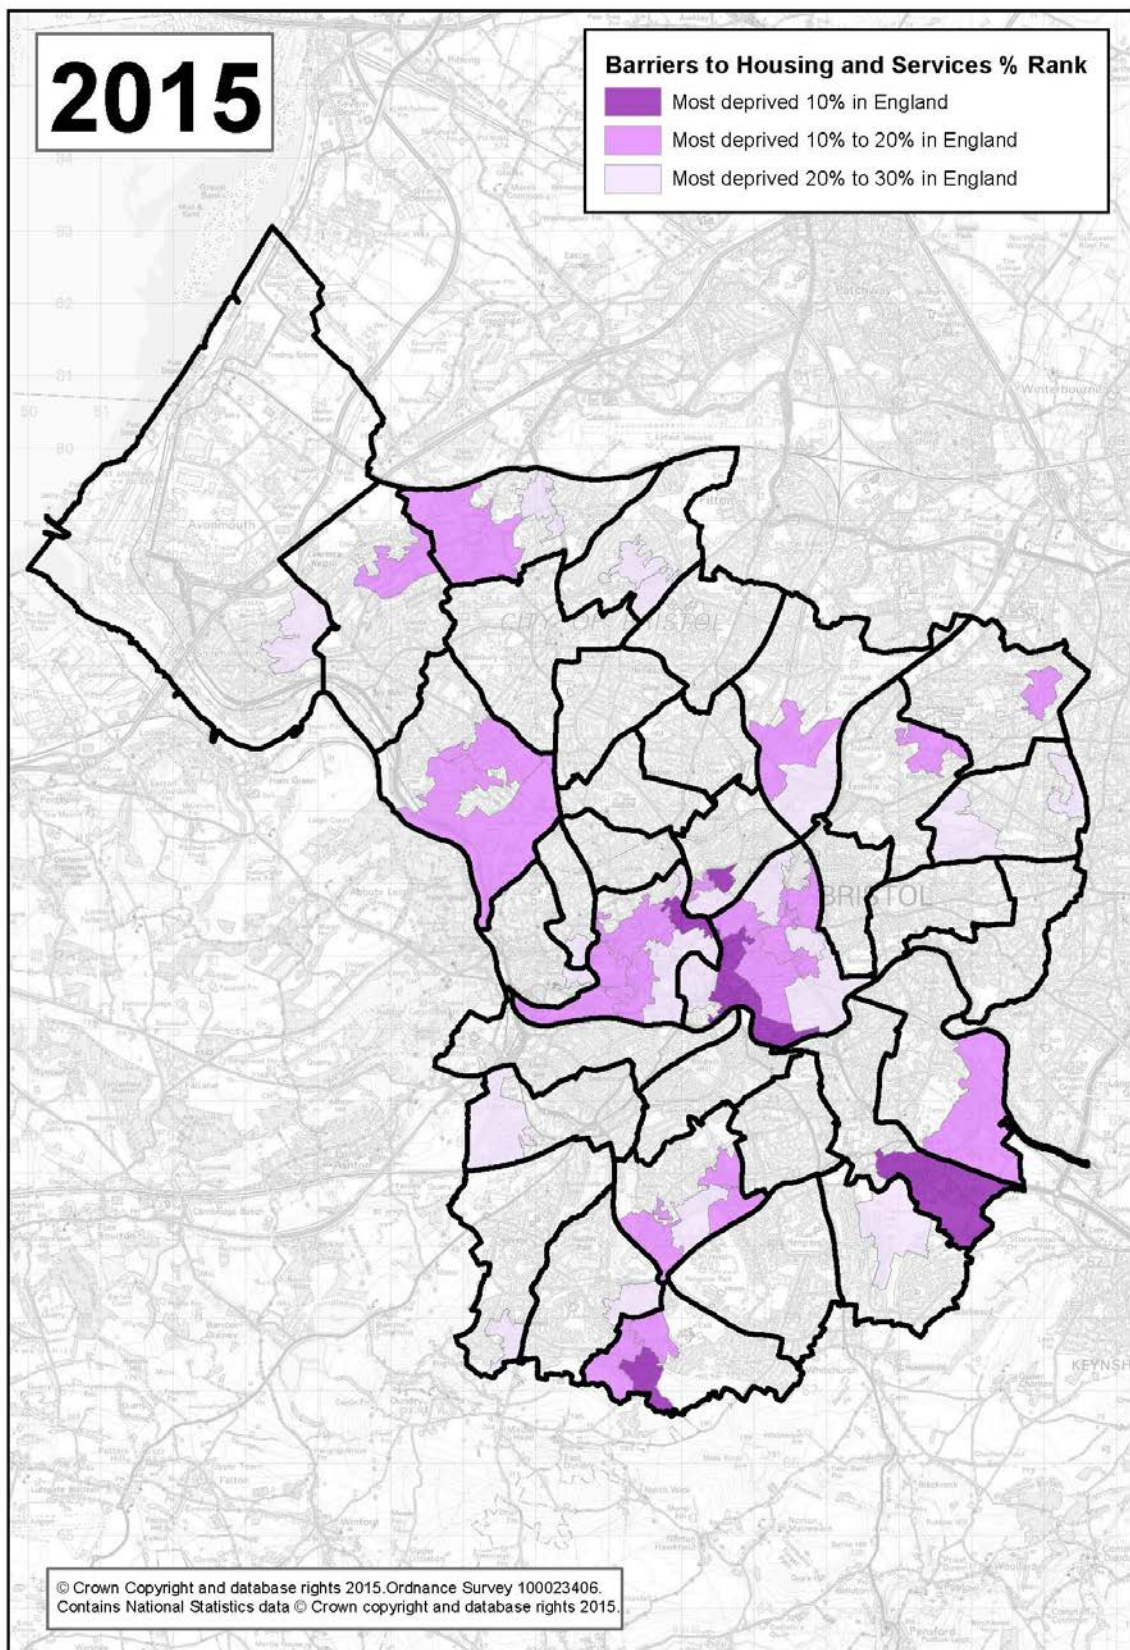

## Key findings for Bristol

4.37 The Barriers to Housing and Services domain is most relevant in urban areas in terms of the wider barriers but less relevant in terms of the geographical barriers where facilities are much more accessible than in rural areas.

- ❖ Less than 8,000 people live in areas of the city identified as in the most deprived 10% nationally for Barriers to Housing and Services.

### Map 13: Barriers to Housing and Services 2015

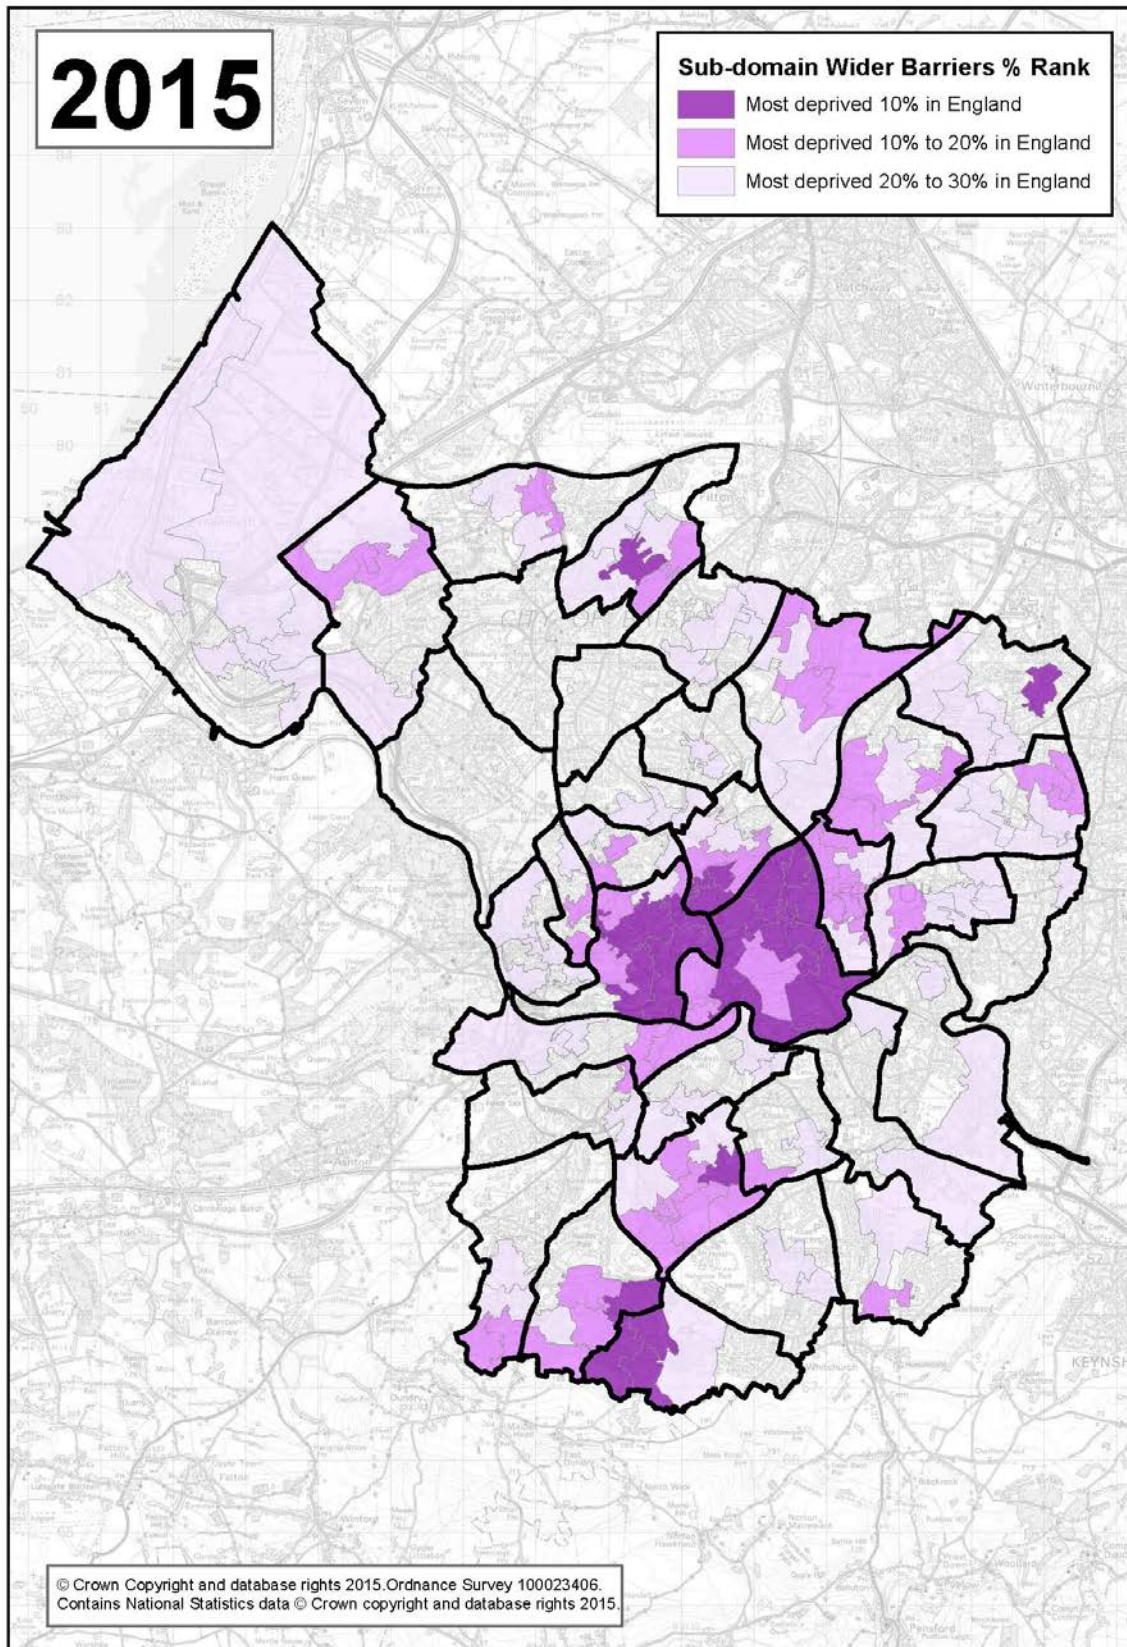

Source: Department for Communities and Local Government, Indices of Deprivation 2015

# Map 14: Wider Barriers Sub domain 2015

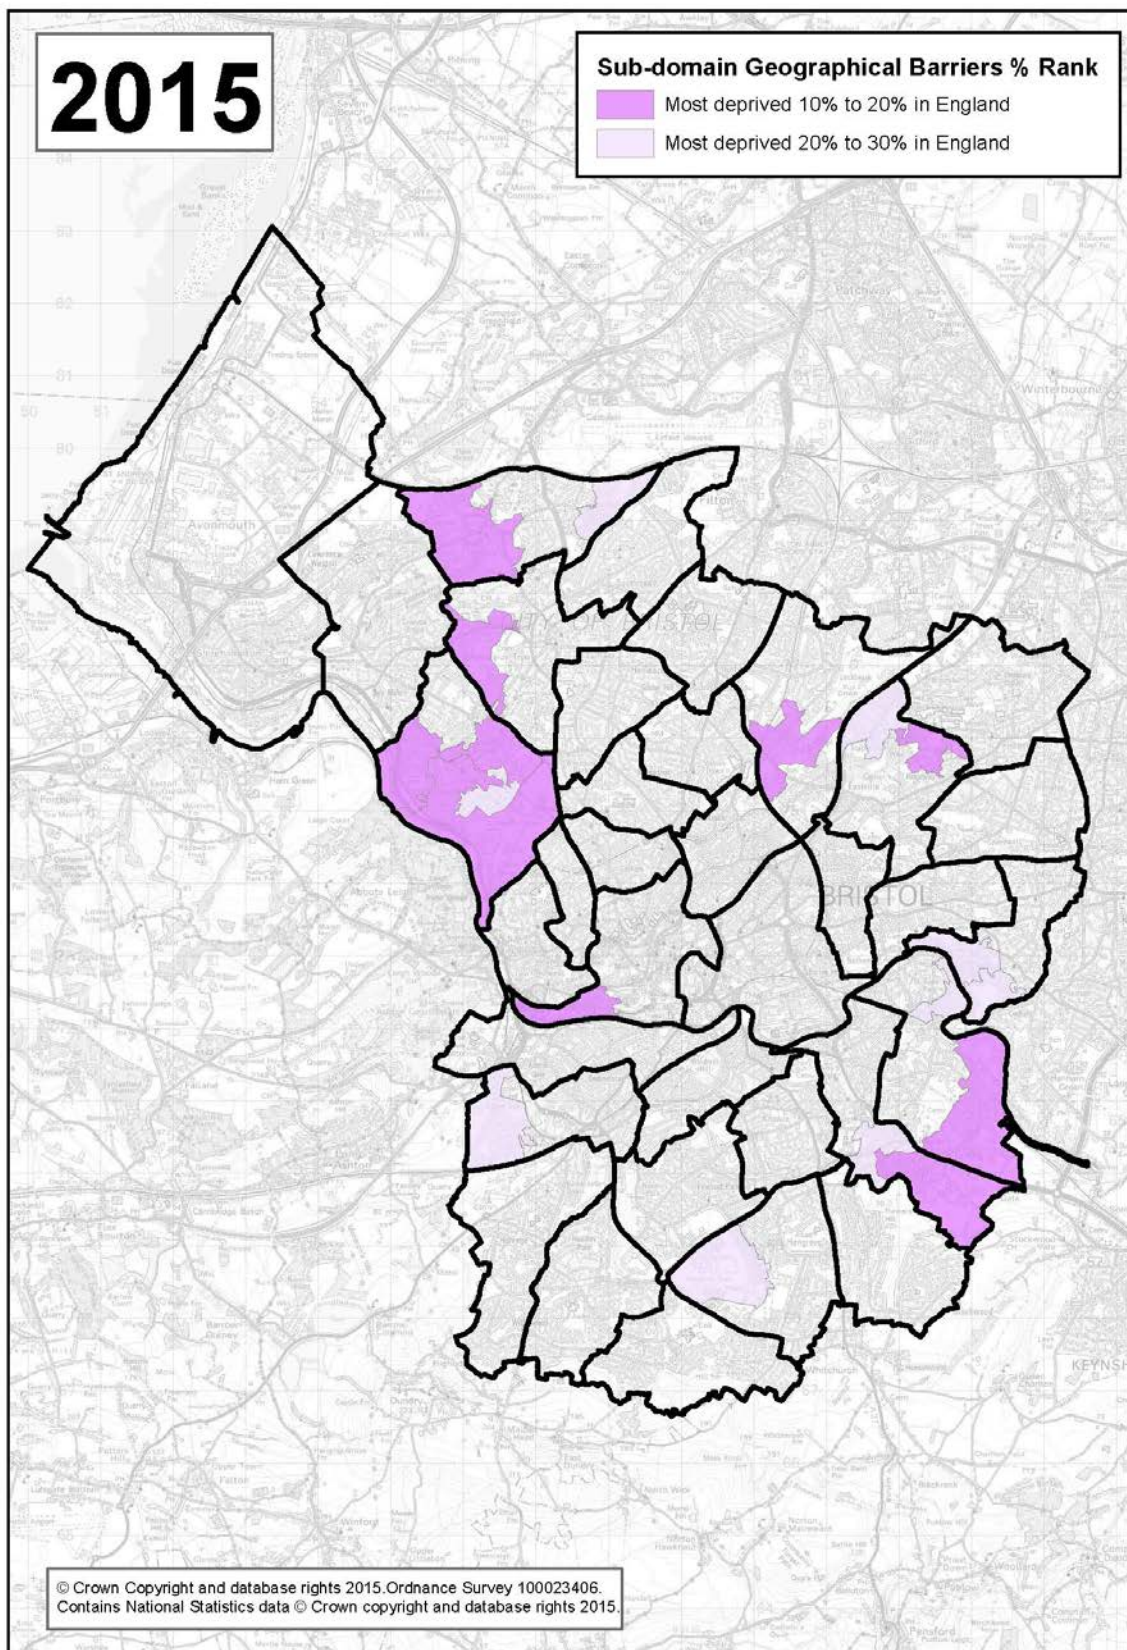

Source: Department for Communities and Local Government, Indices of Deprivation 2015

### Map 15: Geographical Barriers Sub domain 2015

Source: Department for Communities and Local Government, Indices of Deprivation 2015

- ❖ Just 5 LSOAs fall within the most deprived 10% nationally for Barriers to Housing and Services, including 'St James Barton' in Cabot ward, 'Hicks Gate' in Brislington West ward, 'Old Market and Temple Meads' in Lawrence Hill ward, 'Bishport Avenue East' in Whitchurch Park ward and 'St Pauls Grosvenor Road' in Ashley ward.
- ❖ For Wider Barriers to Housing, 22 LSOAs fall within the most deprived 10% nationally. The majority of these (15 LSOAs) are within Central Bristol, 5 in South Bristol, 1 in North Bristol and 1 in East Bristol. Central Bristol is particularly affected - this is a reflection of the higher densities and over-crowding experienced in most urban areas compared to rural areas as well as higher levels of homelessness.
- ❖ No areas of the city fall within the most deprived 10% of areas nationally for Geographical Barriers to Services.

### **Change in relative deprivation between 2010 and 2015**

4.38 In 2010 no areas of Bristol fell within the most deprived 10% of areas nationally whereas in 2015, 5 areas fell within the most deprived 10% nationally.

4.39 The Wider Barriers sub-domain is where deprivation relative to other parts of the country has increased. In 2015 there were 22 LSOAs in the most deprived 10% nationally compared to none in 2010.

## **J. Living Environment Deprivation**

The Living Environment Deprivation Domain measures the quality of the local environment. The indicators fall into two sub-domains. The 'indoors' living environment measures the quality of housing; while the 'outdoors' living environment contains measures of air quality and road traffic accidents.

<b>Indicators</b>
<b>Indoors sub-domain</b>
Houses without central heating: The proportion of houses that do not have central heating
Housing in poor condition: The proportion of social and private homes that fail to meet the Decent Homes standard.
<b>Outdoors sub-domain</b>
Air quality: A measure of air quality based on emissions rates for four pollutants
Road traffic accidents involving injury to pedestrians and cyclists: A measure of road traffic accidents involving injury to pedestrians and cyclists among the resident and workplace population.

**Figure 16: Living Environment Deprivation Percentage Rank by Decile**

### Key findings for Bristol

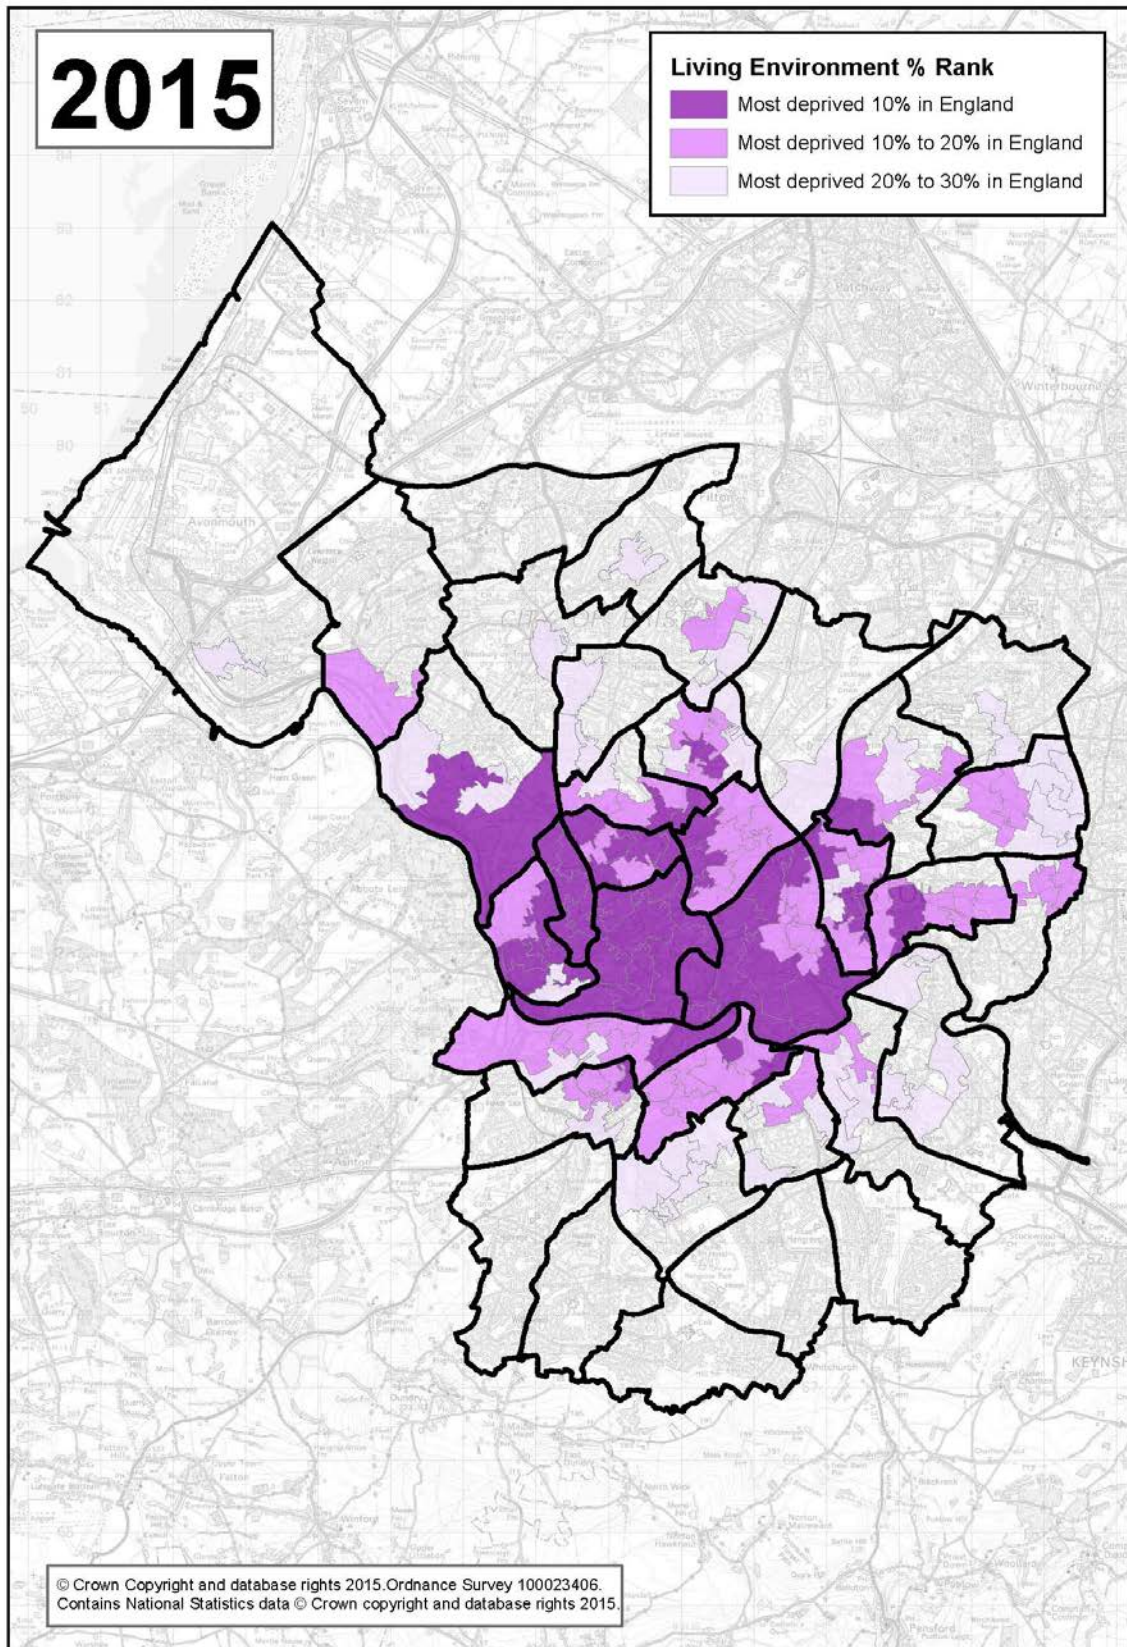

4.40 The distribution of deprivation in this domain is very different to all the other domains. Most of the areas in the most deprived 10% nationally are city centre and inner residential suburbs on the edges of the city centre. Interestingly, some of the areas identified as being deprived in terms of the living environment are the same areas that are better than average rank for the other domains – such as areas of Redland, Cotham and Clifton East - whilst others are the most deprived areas for other domains.

4.41 For Bristol the outdoors living environment sub domain (based on air quality and traffic accidents) tends to be worse in terms of deprivation, however, this is not given as much weight as the indoors living environment sub domain (based on poor housing and central heating) when calculating the overall Living Environment Index.

- ❖ In Bristol as a whole almost 85,000 people live in areas of the city identified as suffering from high levels of Living Environment Deprivation.
- ❖ There are 49 LSOAs in the most income deprived 10% nationally, of these 20 are in Central Bristol, 20 in North Bristol, 5 in East Bristol and just 4 areas in South Bristol.
- ❖ One LSOA 'Brandon Hill' in Cabot ward falls in the most deprived 100 LSOAs in England for Living Environment - it is ranked 29th out of 32,844 areas nationally.
- ❖ In terms of the indoors living environment sub domain, 27 LSOAs fall within the most deprived 10% nationally.
- ❖ In terms of the outdoors living environment sub domain, 63 LSOAs fall within the most deprived 10% nationally. Perhaps surprising is the fact that 'Sneyd Park and the Downs' is the most deprived area of Bristol for the outdoors living environment (433<sup>rd</sup> nationally). This is likely to be a reflection of the high levels of traffic around the Downs area.

## Map 16: Living Environment Deprivation 2015

### Map 17: Indoors Sub domain 2015

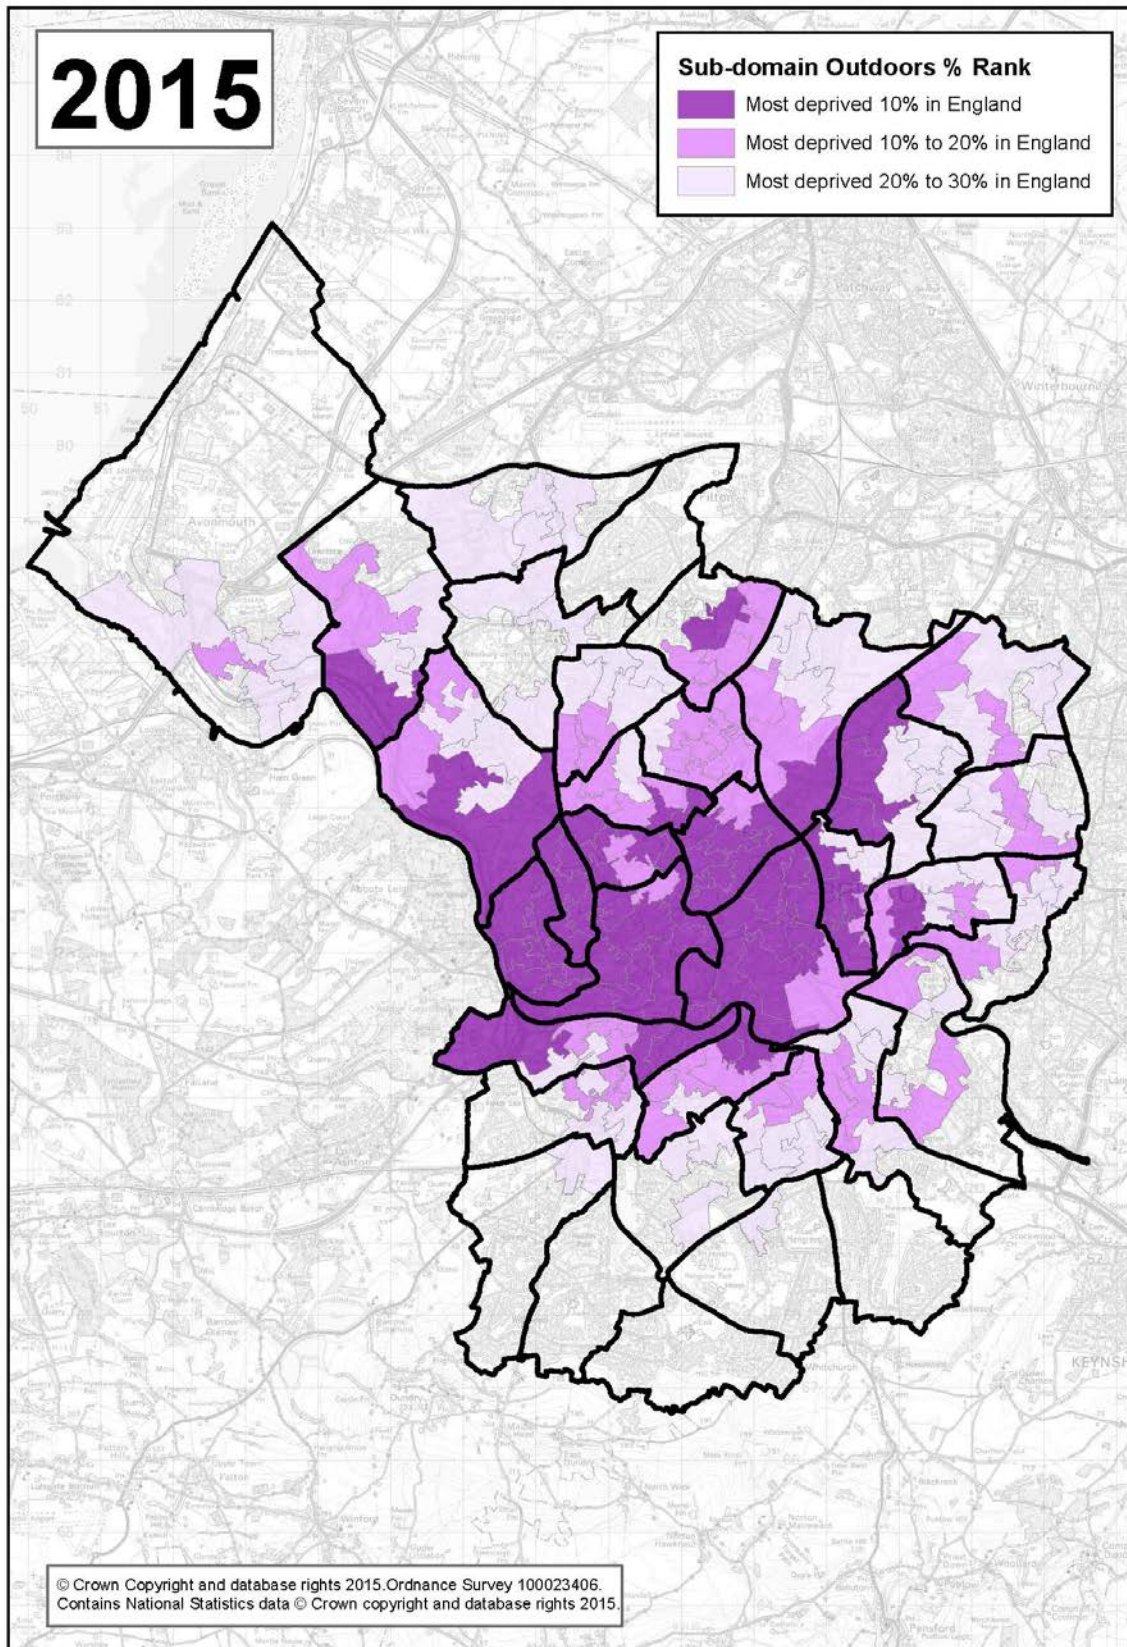

Source: Department for Communities and Local Government, Indices of Deprivation 2015

# Map 18: Outdoors Sub domain 2015

Source: Department for Communities and Local Government, Indices of Deprivation 2015

## **Change in relative deprivation between 2010 and 2015**

4.42 Since 2010, the greatest increase in deprivation relative to other areas in England has been in the Living Environment domain - a measure based on the quality of housing, central heating, air quality and traffic accidents. There are almost twice as many LSOAs in the most deprived 10% nationally in 2015 than in 2010.

4.43 Both the Indoors Living Environment and the Outdoors Living Environment domains have seen higher levels of deprivation relative to other parts of the country.

## **SECTION 5: Ward level results**

5.1 Ward level deprivation statistics are not published as part of the Indices of Deprivation 2015. Lower-layer Super Output Areas are a more suitable small area geography than wards for measuring relative deprivation. Wards are much larger than Lower-layer Super Output Areas, vary greatly in size across the country and are prone to regular boundary changes, making them unsuitable as a unit of analysis or for identifying pockets of deprivation. In contrast Lower-layer Super Output Areas are smaller, of roughly even population size and, in the majority of instances their boundaries are stable between Censuses.

5.2 Much local authority evidence however is required at ward level. As such we have calculated average scores for Multiple Deprivation at ward level using population weighted LSOA level scores. This enables us to rank wards according to average levels of deprivation and also to compare relative deprivation between wards since 2010.

5.3 Figure 17 ranks current wards<sup>3</sup> according to their Multiple Deprivation average score. Since 2010, the majority of wards have seen very little change in their rank relative to other wards. Perhaps the only notable changes are:

- ❖ Windmill Hill ward is relatively less deprived compared to other wards in Bristol in 2015 than it was in 2010. In 2010 it was ranked 15<sup>th</sup> most deprived ward in Bristol whereas it is now ranked as 20<sup>th</sup> most deprived ward.
- ❖ Stockwood ward is relatively more deprived compared to other wards in Bristol in 2015 than it was in 2010. In 2010 it was ranked 25<sup>th</sup> most deprived ward in Bristol whereas it is now ranked as 21<sup>st</sup> most deprived ward.

---

<sup>3</sup> From May 2016 Bristol City Council will have new ward boundaries

# when compared to deprivation levels across England, the deprivation level for the ward shows which decile it would fall into of all Lower-layer Super Output Areas nationally

## SECTION 6: Local Authority level results

6.1 The pattern of deprivation across large areas can be complex. In some areas, deprivation is concentrated in pockets, rather than evenly spread throughout. In some other areas the opposite picture is seen, with deprivation spread relatively evenly throughout the area, and with no highly deprived areas.

6.2 Higher-level areas such as local authority districts or local enterprise partnerships can also vary enormously in terms of geographical area and population size. Accordingly, the volume of deprivation, for example how many people are experiencing income or employment deprivation, should also be taken into account, as well as the intensity of deprivation.

6.3 The set of summary measures have been carefully designed to help users understand deprivation patterns for a set of higher-level areas. The measures identify the overall intensity of deprivation, how deprivation is distributed across the larger area, and the overall volume, or 'scale', of deprivation:

- The **average rank** and **average score** summaries identify the average level of deprivation in the larger area, taking into account all LSOAs in the area.
- The **proportion of LSOAs in the most deprived 10% nationally** and the **extent** measure are summaries of the degree to which the higher-level area is highly deprived. These two summary measures respectively identify the proportion of the LSOAs that are in the most deprived 10 per cent of areas, and a weighted-sum of the population living in the most deprived 30 per cent of areas.
- The **local concentration** summary identifies those higher-level areas with extreme levels of deprivation, by comparing the most deprived LSOAs in the higher-level area against those in other areas across the country.
- The **income scale** and **employment scale** summaries identify the volume of deprivation in the larger area according to the number of people who are, respectively, income deprived or employment deprived. As with the average rank and score, these summaries are based on all Lower-layer Super Output Areas in the larger area.

6.4 No single summary measure is the 'best' measure. Each highlights different aspects of deprivation, and each leads to a different ranking of areas. Comparison of the different measures is needed to give a fuller description of deprivation in a large area. In addition, it is important to remember that the higher-area measures are summaries; the Lower-layer Super Output Area level data provides more detail than is available through the summaries.

### Bristol Local Authority Summary results

6.5 Based on Local Authority citywide summary measures, on the majority of measures Bristol continues to be one of the relatively less deprived English Core Cities (see Figure18).

6.6 Based on the proportion of LSOAs in most deprived 10% nationally, Bristol is the least deprived of the English Core Cities with 16% of LSOAs in the most deprived 10% and ranked 55<sup>th</sup> out of 326 local authorities in England. This compares to Liverpool (45%, ranked 4<sup>th</sup>), Manchester (41%, ranked 5<sup>th</sup>), Birmingham (40%, ranked 6<sup>th</sup>) and Nottingham (34%, ranked 8<sup>th</sup>).

Figure 18: English Core City Local Authority Level Summaries 2015 (where rank 1 is most deprived)																	
Core City	Average rank		Average score		Proportion of LSOAs in most deprived 10% nationally		IMD - Extent		Local concentration	Income - Scale		Employment - Scale					
	average rank	rank/326	average score	rank	%	rank/326	%	rank/326	rank/326	number	rank/326	number	rank/326				
Bristol	19,760	77	27.2	62	16%	55	29%	67	32	72,003	11	35,777	9				
Birmingham	24,955	11	37.8	7	40%	6	56%	6	21	262,497	1	114,273	1				
Leeds	18,462	100	26.6	70	22%	31	31%	58	24	120,622	3	59,553	3				
Liverpool	25,461	7	41.1	4	45%	4	59%	2	7	119,589	4	61,962	2				
Manchester	26,367	1	40.5	5	41%	5	59%	1	11	123,532	2	57,127	4				
Newcastle	18,993	92	28.3	53	22%	30	35%	45	13	54,583	31	26,806	23				
Nottingham	25,061	10	36.9	8	34%	8	56%	7	26	69,166	12	33,532	10				
Sheffield	18,944	94	27.6	60	23%	26	34%	47	29	95,998	6	46,227	7				

6.7 The extent measure shows how widespread high levels of deprivation are in an area. In Bristol 29% of people live in the most deprived areas nationally and is ranked 67<sup>th</sup> out of 326 local authorities. This compares well to other Core Cities where more than half of the people live in the most deprived areas - Manchester (59% ranked 1<sup>st</sup>), Liverpool (59% ranked 2<sup>nd</sup>), Birmingham (56% ranked 6<sup>th</sup>) and Nottingham (56% ranked 7<sup>th</sup>).

6.8 Local concentration is an important way of identifying local authorities 'hot spots' of deprivation. Bristol is ranked 32<sup>nd</sup> nationally out of 326 local authorities. All the other English Core Cities experience more concentrations of high levels of deprivation.

6.9 On the measures of scale of deprivation which look at the actual number of people deprived, Bristol is ranked 11<sup>th</sup> for the number of people income deprived and ranked 9<sup>th</sup> for the number of working age people who are employment deprived. Both Newcastle and Nottingham have fewer people income and employment deprived than Bristol.

### **How has Bristol's position changed relative to the other Core Cities since 2010?**

6.10 There is a mixed picture across the Core Cities with some cities relatively less deprived than in 2010 and some cities relatively more deprived than in 2010.

6.11 Since 2010, Bristol's relative rank in terms of Multiple Deprivation has increased across all local authority level summary measures with the exception of employment scale where Bristol's rank is unchanged. Bristol has on the whole seen a greater increase in rank (indicating higher levels of relative deprivation) than the other English Core Cities, however, this was mainly from a less deprived starting point. Bristol still remains one of least deprived of the English Core Cities based on the Index of Multiple Deprivation 2015.

## SECTION 7: Further information and useful links

### Postcode and mapping tools

The [Indices of Deprivation 2015 Explorer](#) is an interactive mapping tool to look up the relative level of deprivation across the country and locally.

If you have a list of postcodes that you would like deprivation data for, you can use the [English Indices of Derivation Postcode Lookup](#) where you can upload a list of up to 10,000 postcodes. The output file lists the postcodes entered, the Lower Layer Super Output Area (LSOA) that each postcode falls within, and the deprivation data for that LSOA.

### Useful links

All of the data and guidance documents are available from <https://www.gov.uk/government/statistics/english-indices-of-deprivation-2015>

For more information on LSOA boundary changes refer to [2011 Geographies for 2011 Census data in Bristol](#)

This report is available from the [Bristol City Council web site](#)

## Appendix 2: Indicator details and data sources

This Appendix provides numerator and denominator details for each of the 37 indicators included in the Indices of Deprivation 2015. As far as is possible, each indicator has been based on data from the most recent time point available. Using the latest available data in this way means that there is not a single consistent time point for all indicators, however in practice most indicators in the Indices of Deprivation 2015 relate to the tax year 2012/13. Where the denominator is detailed as residential population, this includes the communal establishment population, but excludes any prison population.

Income Deprivation Domain	
<b>1. Adults and children in Income Support families</b>	Numerator: As described, 2012 (Department for Work and Pensions) Denominator (for summed Income Domain indicators): Total resident population mid-2012 (Office for National Statistics) less the prison population (Ministry of Justice).
<b>2. Adults and children in income-based Jobseeker's Allowance families</b>	Numerator: As described, 2012 (Department for Work and Pensions) Denominator (for summed Income Domain indicators): Total resident population mid-2012 (Office for National Statistics) less the prison population (Ministry of Justice).
<b>3. Adults and children in income-based Employment and Support Allowance families</b>	Numerator: As described, 2012 (Department for Work and Pensions) Denominator (for summed Income Domain indicators): Total resident population mid-2012 (Office for National Statistics) less the prison population (Ministry of Justice).
<b>4. Adults and children in Pension Credit (Guarantee) families</b>	Numerator: As described, 2012 (Department for Work and Pensions) Denominator (for summed Income Domain indicators): Total resident population mid-2012 (Office for National Statistics) less the prison population (Ministry of Justice).
<b>5. Adults and children in Working Tax Credit and Child Tax Credit families not already counted, that is those who are not in receipt of Income Support, income-based Jobseeker's Allowance, income-based Employment and Support Allowance or Pension Credit (Guarantee) and whose equivalised income (excluding housing benefit) is below 60 per cent of the median before housing costs</b>	Numerator: As described, 2012 (HM Revenue and Customs) Denominator (for summed Income Domain indicators): Total resident population mid-2012 (Office for National Statistics) less the prison population (Ministry of Justice).
<b>6. Asylum seekers in England in receipt of subsistence support, accommodation support, or both</b>	Numerator: As described, 2012 (Home Office) Denominator (for summed Income Domain indicators): Total resident population mid-2012 (Office for National Statistics) less the prison population (Ministry of Justice).
Employment Deprivation Domain	
<b>7. Claimants of Jobseeker's Allowance (both contribution-based and income-based), women aged 18-59 and men aged 18-64</b>	Numerator: As described, four quarters from May 2012 to February 2013 (Department for Work and Pensions) Denominator (for summed Employment Domain indicators): Working-age population, women aged 18 to 59 and men aged 18 to 64 (Office for National Statistics population estimates 2012 and 2013) less the prison population (Ministry of Justice).

<p><b>8. Claimants of Employment and Support Allowance (both contribution-based and income-based), women aged 18-59 and men aged 18-64</b></p> <p>Numerator: As described, four quarters from May 2012 to February 2013 (Department for Work and Pensions)</p> <p>Denominator (for summed Employment Domain indicators): Working-age population, women aged 18 to 59 and men aged 18 to 64 (Office for National Statistics population estimates 2012 and 2013) less the prison population (Ministry of Justice).</p>
<p><b>9. Claimants of Incapacity Benefit, women aged 18-59 and men aged 18-64</b></p> <p>Numerator: As described, four quarters from May 2012 to February 2013 (Department for Work and Pensions)</p> <p>Denominator (for summed Employment Domain indicators): Working-age population, women aged 18 to 59 and men aged 18 to 64 (Office for National Statistics population estimates 2012 and 2013) less the prison population (Ministry of Justice).</p>
<p><b>10. Claimants of Severe Disablement Allowance, women aged 18-59 and men aged 18-64</b></p> <p>Numerator: As described, four quarters from May 2012 to February 2013 (Department for Work and Pensions)</p> <p>Denominator (for summed Employment Domain indicators): Working-age population, women aged 18 to 59 and men aged 18 to 64 (Office for National Statistics population estimates 2012 and 2013) less the prison population (Ministry of Justice).</p>
<p><b>11. Claimants of Carer's Allowance, women aged 18-59 and men aged 18-64</b></p> <p>Numerator: As described, four quarters from May 2012 to February 2013 (Department for Work and Pensions)</p> <p>Denominator (for summed Employment Domain indicators): Working-age population, women aged 18 to 59 and men aged 18 to 64 (Office for National Statistics population estimates 2012 and 2013) less the prison population (Ministry of Justice).</p>

Education Skills and Training Deprivation Domain
<p><b>12. Key Stage 2 attainment</b></p> <p>Numerator: Total score of pupils taking reading, writing and mathematics Key Stage 2 exams in maintained schools, 2010/11, 2011/12 and 2012/13 (Department for Education)</p> <p>Denominator: Total number of Key Stage 2 subjects taken by pupils in maintained schools, 2010/11, 2011/12 and 2012/13 (Department for Education).</p>
<p><b>13. Key Stage 4 attainment</b></p> <p>Numerator: Total capped (best 8) score of pupils taking Key Stage 4 in maintained schools, 2010/11, 2011/12 and 2012/13 (Department for Education)</p> <p>Denominator: All pupils in maintained schools who took Key Stage 4 exams, 2010/11, 2011/12 and 2012/13 (Department for Education).</p>
<p><b>14. Secondary school absence</b></p> <p>Numerator: Number of authorised and unauthorised absences from secondary school, 2010/11, 2011/12 and 2012/13 (Department for Education)</p> <p>Denominator: Total number of possible sessions for 2010/11, 2011/12 and 2012/13 (Department for Education).</p>
<p><b>15. Staying on in education post 16</b></p> <p>Numerator: Young people not staying on in school or non-advanced education above age 16, 2010, 2011 and 2012 (HM Revenue and Customs)</p> <p>Denominator: Young people aged 15 receiving Child Benefit in 2008, 2009 and 2010 (HM Revenue and Customs).</p>

**16. Entry to higher education**

Numerator: Young people aged under 21 not entering higher education, 2009/10, 2010/11, 2011/12 and 2012/13 (Higher Education Statistics Agency)

Denominator: Population aged 14-17, 2009, 2010, 2011 and 2012 (Office for National Statistics population estimates) less the prison population (Ministry of Justice).

**17. Adult skills**

Numerator: Working-age adults with no or low qualifications, non-overlapping count with English language proficiency indicator, women aged 25 to 59 and men aged 25 to 64, 2011 (Office for National Statistics, from Census 2011)

Denominator: Working-age adults, women aged 25 to 59 and men aged 25 to 64, 2011 (Census).

**18. English language proficiency**

Numerator: Working-age adults who cannot speak English or cannot speak English well, non-overlapping count with Adult skills indicator, women aged 25 to 59 and men aged 25 to 64, 2011 (Office for National Statistics, from Census 2011)

Denominator: Working-age adults, women aged 25 to 59 and men aged 25 to 64, 2011 (Census).

**Health Deprivation and Disability Domain****19. Years of potential life lost**

Numerator: Mortality data in five-year age-sex bands, for 2008, 2009, 2010, 2011 and 2012 (Office for National Statistics)

Denominator: Total resident population in five-year age-sex bands, for 2008, 2009, 2010, 2011 and 2012 (Office for National Statistics population estimates) less the prison population (Ministry of Justice).

**20. Comparative illness and disability ratio**

Numerator: Non-overlapping counts of people in receipt of Income Support, Disability Premium, Attendance Allowance, Disability Living Allowance, Severe Disablement Allowance, Incapacity Benefit in five-year age-sex bands, 2013 (Department for Work and Pensions)

Denominator: Total resident population in five-year age-sex bands, 2013 (Office for National Statistics population estimates) less the prison population (Ministry of Justice).

**21. Acute morbidity**

Numerator: Hospital spells starting with admission in an emergency in five-year age-sex bands, 2011/12 and 2012/13 (Health and Social Care Information Centre, Hospital Episode Statistics)

Denominator: Total resident population in five-year age-sex bands, 2011/12 and 2012/13 (Office for National Statistics population estimates) less the prison population (Ministry of Justice).

**22. Mood and anxiety disorders**

A composite based on the rate of adults suffering from mood and anxiety disorders (source: Health and Social Care Information Centre, 2013), hospital episodes data (source: Health and Social Care Information Centre, Hospital Episode Statistics, 2011/12 and 2012/13), suicide mortality data (source: Office of National Statistics, 2008, 2009, 2010, 2011 and 2012) and health benefits data (source: Department for Work and Pensions, 2013).

Crime Domain	
<b>23. Violence</b>	Numerator: 18 recorded crime offence types, 2013/14 (Association of Chief Police Officers, provided by the Home Office) Denominator: Total resident population, 2013 (Office for National Statistics) less the prison population (Ministry of Justice) plus the non-resident workplace population, 2011 (Census).
<b>24. Burglary</b>	Numerator: 4 recorded crime offence types, 2013/14 (Association of Chief Police Officers, provided by the Home Office) Denominator: Total residential dwellings, 2011 (Census), plus non-domestic addresses (Ordnance Survey's Address Base).
<b>25. Theft</b>	Numerator: 5 recorded crime offence types, 2013/14 (Association of Chief Police Officers, provided by the Home Office) Denominator: Total resident population, 2013 (Office for National Statistics) less the prison population (Ministry of Justice) plus the non-resident workplace population, 2011 (Census).
<b>26. Criminal damage</b>	Numerator: 8 recorded crime offence types, 2013/14 (Association of Chief Police Officers, provided by the Home Office) Denominator: Total resident population, 2013 (Office for National Statistics) less the prison population (Ministry of Justice) plus the non-resident workplace population, 2011 (Census).
Barriers to Housing and Services Domain	
<b>27. Road distance to a post office</b>	Population weighted mean of Output Area road distance score (the road distance from the populated weighted Output Area centroid to nearest Post Office), 2014 (Post Office Ltd).
<b>28. Road distance to a primary school</b>	Population weighted mean of Output Area road distance score (the road distance from the populated weighted Output Area centroid to nearest primary school), 2014 (Department for Education Edubase).
<b>29. Road distance to general store or supermarket</b>	Population weighted mean of Output Area road distance score (the road distance from the populated weighted Output Area centroid to general store or supermarket), 2014 (Ordnance Survey).
<b>30. Road distance to a GP surgery</b>	Population weighted mean of Output Area road distance score (the road distance from the population weighted Output Area centroid to nearest GP premises), 2014 (Health and Social Care Information Centre).
<b>31. Household overcrowding</b>	Numerator: Overcrowded households, 2011 (Census) Denominator: Total number of households, 2011 (Census).
<b>32. Homelessness</b>	Numerator: Number of accepted decisions for assistance under the homelessness provisions of housing legislation, average of 2011/12, 2012/13 and 2013/14 (Department for Communities and Local Government) Denominator: Total number of households, 2011 (Census).

**33. Housing affordability**

Modelled estimate of households unable to afford to enter owner-occupation or the private rental market on the basis of their income, estimated primarily from the Family Resources Survey, Regulated Mortgage Survey, Land Registry house prices, and Valuation Office Agency market rents, 2012.

**Living Environment Deprivation Domain****34. Housing in poor condition**

Modelled estimate of the probability that any given dwelling in the Output Area (aggregated to Lower-layer Super Output Area level) fails to meet the Decent Homes standard, estimated from the English Housing Survey, 2011.

**35. Houses without central heating**

Numerator: As described, 2011 (Census)

Denominator: Total number of households, 2011 (Census).

**36. Air quality**

Modelled estimates of air quality based on the concentration of four pollutants (nitrogen dioxide, benzene, sulphur dioxide and particulates), estimated from UK Air Information Resource air quality, 2012.

**37. Road traffic accidents**

Numerator: Injuries to pedestrians and cyclists caused by road traffic accidents, 2011, 2012 and 2013 (Department for Transport)

Denominator: Total resident population, averaged over 2011 to 2013 (Office for National Statistics) less the prison population (Ministry of Justice) plus non-resident workplace population, 2011 (Census)
