## 1. Introduction

- 1.1 This report sets out the assessment of the five year housing land supply for the period 2020 to 2025. The National Planning Policy Framework (NPPF) states that local planning authorities should identify and update annually a supply of specific deliverable sites sufficient to provide a minimum of five years' worth of housing. For Bristol this supply is measured against the local housing need using the standard method calculation as the strategic policies contained in the Local Plan Core Strategy are more than five years old.
- 1.2 This assessment of housing land supply incorporates evidence from a questionnaire of applicants/agents of sites with planning permission for 10 or more dwellings.

## 2. Standard Method

- 2.1 Bristol's housing requirement was set out in the adopted Local Plan Core Strategy which was adopted on 21st June 2011. This strategic policy is more than five years old and therefore the NPPF requires that the five year housing supply calculation be based on the standard method as set out in the Ministry of Housing, Communities and Local Government (MHCLG) Planning Practice Guidance (PPG).
- 2.2 The standard method is based on the Department for Communities and Local Government (DCLG) 2014-based household projections using the annual average change over the 10-year period 2020 to 2030. An affordability adjustment is made to the household projections based on the Office for National Statistics (ONS) 2019 ratio of median house price to median gross annual workplace-based earnings. The affordability adjustment factor is calculated as follows - for each 1% the ratio is above 4, the average household growth baseline is increased by a quarter of a percent. A cap can be applied to the local housing need if the figure is 40% above the projected household growth for the area over the period 2020 to 2030. This cap does not apply to Bristol. The standard method calculation figures are set out in Table 1 below.

**Table 1. Summary of MHCLG standard method calculation for Bristol**

Row	Calculation	Numbers
A	DCLG 2014-based Household Projections annual average change 2020 to 2030	1,824
B	ONS 2019 ratio of median house price to median gross annual workplace-based earnings	8.77
C	PPG affordability adjustment factor calculation	1.30
D	Annual local housing need (Row A multiplied by Row C)	2,368
E	Five year local housing need (Row D multiplied by 5)	11,838
F	<b>Five year local housing need including 20% buffer</b> (Row E multiplied by 1.20)	<b>14,205</b>

Note: figures may not sum due to rounding.

- 2.3 Changes to the standard method were published by MHCLG on 16<sup>th</sup> December 2020. These changes will mean that from 16<sup>th</sup> June 2021 an additional 35% will need be added to the standard method calculation for Bristol, and other large urban areas, for the purposes of calculating the five year housing land supply. This increase will be applied to the five year housing supply assessment for 2021 to 2026. The 2021 to 2026 calculation will also include the ONS 2020 affordability ratio and roll forward the household projection period to 2021 to 2031.

### 3. Buffer

- 3.1 MHCLG published the 2020 Housing Delivery Test results on 19th January 2021. The result showed that Bristol achieved 72% of the delivery requirement over the three-year period 2017/18 to 2019/20. The result meant that all three consequences of the Housing Delivery Test apply to Bristol: the need to prepare a Housing Delivery Test Action Plan; the inclusion of an additional 20% buffer in the five year housing land supply calculation; and applying the presumption in favour of sustainable development to decision-taking. A 20% buffer has therefore been included in the calculation in Table 1 above.

### 4. Five year housing land supply 2020-25

- 4.1 A survey was carried out of applicants / agents of sites of ten or more dwellings with planning permission or agreed subject to signing a section 106 agreement. Sites with less than ten dwellings were not included in the survey.
- 4.2 The questionnaire sought evidence on whether housing completions would begin on site within five years; confirmation of the estimated site capacity; and an estimated delivery trajectory. There was around a 45% response rate to the survey.
- 4.3 Evidence from the survey has informed the assessment of land supply within the first five years. Where there no evidence has been provided the deliverability of sites has been based on the definition of deliverable contained in the NPPF as follows:

**‘Deliverable:** To be considered deliverable, sites for housing should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years. In particular:

a) sites which do not involve major development and have planning permission, and all sites with detailed planning permission, should be considered deliverable until permission expires, unless there is clear evidence that homes will not be delivered within five years (for example because they are no longer viable, there is no longer a demand for the type of units or sites have long term phasing plans).

b) where a site has outline planning permission for major development, has been allocated in a development plan, has a grant of permission in principle, or is identified on a brownfield register, it should only be considered deliverable where there is clear evidence that housing completions will begin on site within five years.’

- 4.4 A schedule of sites and a summary of their deliverability is set out in Appendix A. This schedule includes all sites with planning permission for housing or agreed subject to subject to signing a section 106 agreement at 31<sup>st</sup> March 2020. It also includes a small number of sites allocated in

the adopted Local Plan which have subsequently gained planning permission and are therefore considered deliverable.

## 5. Five year housing land supply calculation

- 5.1 Table 2 below shows the calculation of the five year housing land supply position. The five year local housing need using the standard method and including a 20% buffer was 14,205. The identified deliverable housing supply for the period 2020 to 2025 was 10,579. The number of years supply based on the identified deliverable housing supply and the local housing need is 3.7 years.

**Table 2. Assessment of five year supply 2020-2025**

Row	Calculation	Numbers
A	Five year local housing need including 20% buffer	14,205
B	Five year supply 2020-2025	10,579
C	<b>Number of years supply</b> (Row A divided by Row B multiplied by 5)	<b>3.7</b>

- 5.2 It is therefore concluded that a five year supply of housing sites cannot currently be demonstrated.

## Appendix A

**Table 3. Five year housing land supply assessment of sites**

Site reference	Planning reference	Site address	Dwellings 2020-2025	Dwellings 2025-	Dwellings total	Five year supply assessment
