

# Ward Profile Report (May 2024)

This dashboard compares the 34 Bristol City Council wards with the Bristol average, across a range of data subjects.

**Update August 2024 (v3.7):**

Due to updated population estimates from the Office for National Statistics, data has been corrected for the following topics:

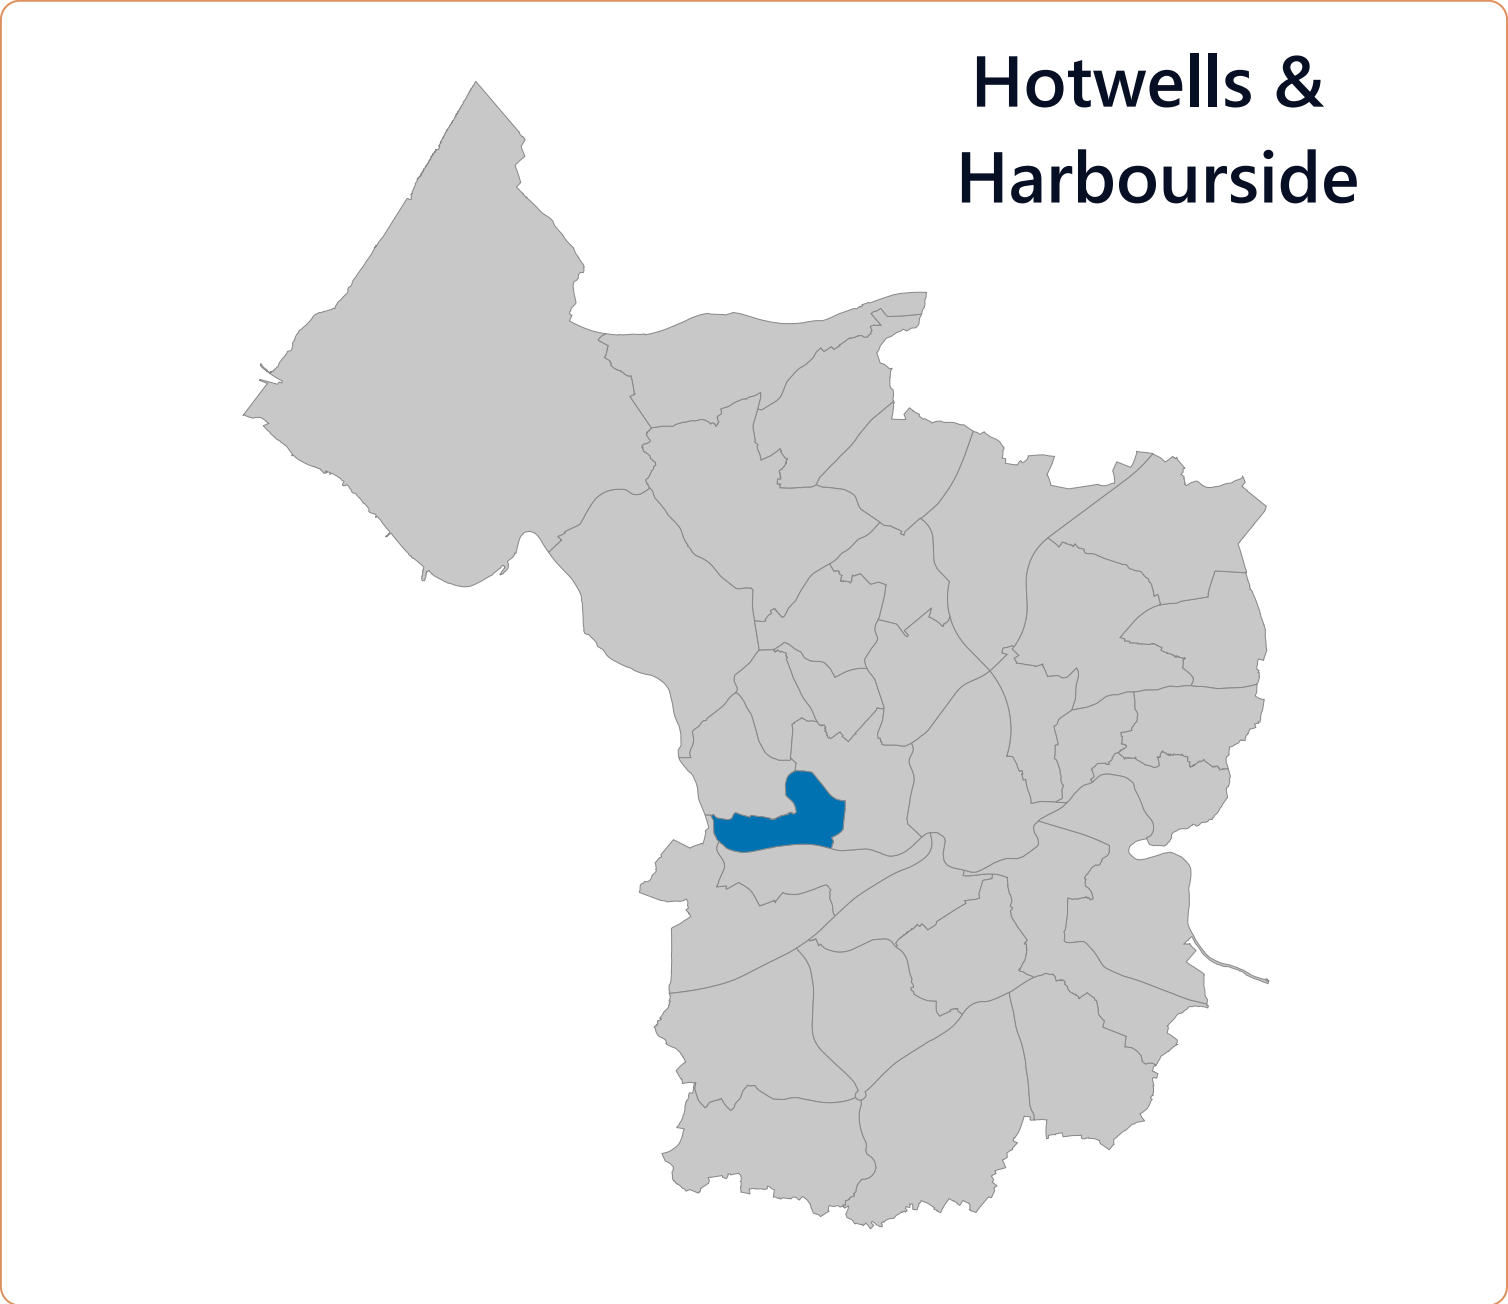

- **Life Expectancy (2020 - 2022)**

**Update May 2024 (v3.6):**

Data has been updated for the following topics:

- **Adult Social Care**
- **Benefits**
- **Child Poverty**
- **Children Services**
- **Country of Birth (Census)**
- **Crime**
- **Education**
- **Healthy Lifestyles**
- **Industry & Occupation (Census)**
- **Population Overview & Age Profile**
- **Quality of Life**

Please send any comments on this tool to: [research@bristol.gov.uk](mailto:research@bristol.gov.uk). All datasets within the Ward Profile Tool can be downloaded from [Open Data Bristol](#).

## Hotwells and Harbourside

### Further Information

#### Data

Figures quoted are 'as at' the last day of that particular month.

#### Calculation

Data is expressed as a rate per 1,000 of the ward population within the cohort selected (i.e. social care data). Population uses the latest mid-year population estimates available. Historic data may be changed once the Office for National Statistics revise previous mid-year estimates.

#### Comparing wards against the Bristol Average

Wards are colour-coded to show any significant difference from the Bristol Average. Social Care Data uses standard deviation to identify whether the gap is significant.

Significantly High

#### Clients in Care Homes aged 65+

#### Bristol Average

#### Clients receiving a community based service aged 65+

### Hotwells & Harbourside

#### Further Information

##### Data & Calculation

The percentage of children living in low income families by ward, by financial year ending (FYE). Low income is a gross income measure Before Housing Costs and includes contributions from earning, state support and pensions. Percentages are rounded to 1 decimal point. Relative low income measures families on low income within the referenced year. Absolute low income measures families in low income compared to FYE 2011. Percentages are calculated using the latest mid-year population estimates. Percentages are rounded to 1 decimal point.

##### Comparing wards against the Bristol average

Wards are colour-coded to show any significant difference from the Bristol Average. To measure whether the gap is significant, child poverty data uses standard deviation.

# Children's Services

Bristol City Council

## Hotwells and Harbourside

### Further Information

#### Data

Figures quoted are 'as at' the last day of the stated month. The exception of suspensions data which represents the year (January to December).

Some wards present as 'No Data Available'. This represents those with no cases and those with five or less cases, suppressed to protect identity.

#### Calculation

Data is expressed as a 'rate per 1,000' of the ward population within the cohort selected (i.e. social care data). The latest mid-year estimates have been used for population data.

#### Comparing wards against the Bristol Average

Wards are colour-coded to show any significant difference from the Bristol Average. Social Care Data uses standard deviation to identify whether the gap is significant.

Significantly High  
Not Significantly Different  
Significantly Low

Social Care Indicator	Period Ending	Ward Statistic (rate)	Bristol Average (rate)
Children in Need	March 2024	13.3	17.3
Children with Child Protection Plan	March 2024	4.5	4.5
Children in Care	March 2024	8.4	8.4

Number of individuals suspended	December 2023	29.2	45.2

### Children known to Social Care (total)

March 2024

# Hotwells & Harbourside

## Further Information

**Data**  
Figures for crime offences and youth offenders are a total for the respective year. The number of youth offenders are used as the indicator rather than the number of offences committed. Quality of Life data is from the 2023-24 survey.

**Calculation**  
Crime offence and youth offender data is expressed as a rate per 1,000 of the ward population within the cohort selected (i.e. crime data). The latest mid-year estimates are used for the population. Quality of Life data is weighted by age and sex. Percentages are rounded to 1 decimal point.

**Comparing wards against the Bristol Average**  
Wards are colour-coded to show any significant difference from the Bristol Average. To measure whether the gap is significant; crime offences and youth offenders data uses standard deviation whilst the quality of life data uses the statistical 't-test'.

# Education

Bristol City Council / Department for Education

## Hotwells & Harbourside

### Further information

#### Data & Calculation

Based on all children in Bristol local authority maintained schools, academies and free schools (but not independent schools). The Bristol total will include pupils living outside the area but the ward figures will not. \*Due to the Coronavirus (Covid-19) pandemic, attainment data is not available for the years 2020 and 2021.

Most figures are expressed as a percentage of pupils in a given cohort. Attainment 8 and Progress 8 scores are measures from Department for Education. Attainment 8 is an average across 8 subjects (extra weighting is given to English and Maths). Progress 8 compares how well a pupil has progressed across the same 8 subjects, compared nationally to other pupils with the same prior attainment at the end of Key Stage 2. Percentages are rounded to 1 decimal point.

#### Comparing wards against the Bristol Average

Wards are colour-coded to show any significant difference from the Bristol Average. Education data uses standard deviation to identify whether the gap is significant.

Provides no unpaid care	5,624	95.6

### Hotwells & Harbourside

#### Further Information

##### Data

Quality of Life data is from the 2023-24 survey. Public Health Child Measurement data 2021/22-2022/23 for children in reception year and year 6 represents the first data available post-Coronavirus (Covid-19) pandemic.

##### Calculation

Both Quality of Life and Public Health Child Measurement data is expressed as a percentage. Quality of Life data is weighted by age and percentage. Public Health Child Measurement data is an average of the 2 year period and excludes wards with less than 100 pupils measured over that period. Percentages are rounded to 1 decimal point.

##### Comparing wards against the Bristol average

Wards are colour-coded to show any significant difference from the Bristol Average. To measure whether the gap is significant Public Health Child Measurement data uses statistical confidence intervals, whilst quality of life data uses the statistical 't-test'.

### Hotwells & Harbourside

#### Further information

##### Data

Data expresses life expectancy in years, separately for males and females.

##### Calculation

Life expectancy is normally calculated by taking a three year average. However, the period 2020-2022 uses a two year average. Data uses population estimates from the Office for National Statistics (ONS) for 2021 and 2022. The ONS are due to issue new trend data for population estimates, life expectancy numbers could change.

##### Comparing wards against the Bristol average

Wards are colour-coded to show any significant difference from the Bristol Average. Life expectancy data uses statistical confidence intervals to identify whether the gap is significant.

2020-2022

## Hotwells & Harbourside

### Further information

#### Data

Directly age standardised rates for deaths in people aged under 75 years, per 100,000 population.

#### Calculation

Data normally takes a three year average (respiratory disease a 5 year average due to small numbers involved). However, 2020-2022 uses a two year average. Numbers for this period are also provisional and subject to change. A delay in ward population estimates from the Office for National Statistics means year 2020 population estimates have been used instead. Once new estimates are published numbers will change.

#### Comparing wards against the Bristol average

Wards are colour-coded to show any significant difference from the Bristol Average. Premature mortality data uses statistical confidence intervals to identify whether the gap is significant.

# House Prices

Median House Price Statistics, produced by Office for National Statistics.

## Hotwells & Harbourside

### Further Information

**Data**  
Data represents the price paid (£) for residential dwellings sold at market value, using open data from HM Land Registry.

Data is published quarterly and represents a 'rolling year'. This data starts with the year-ending March 2011.

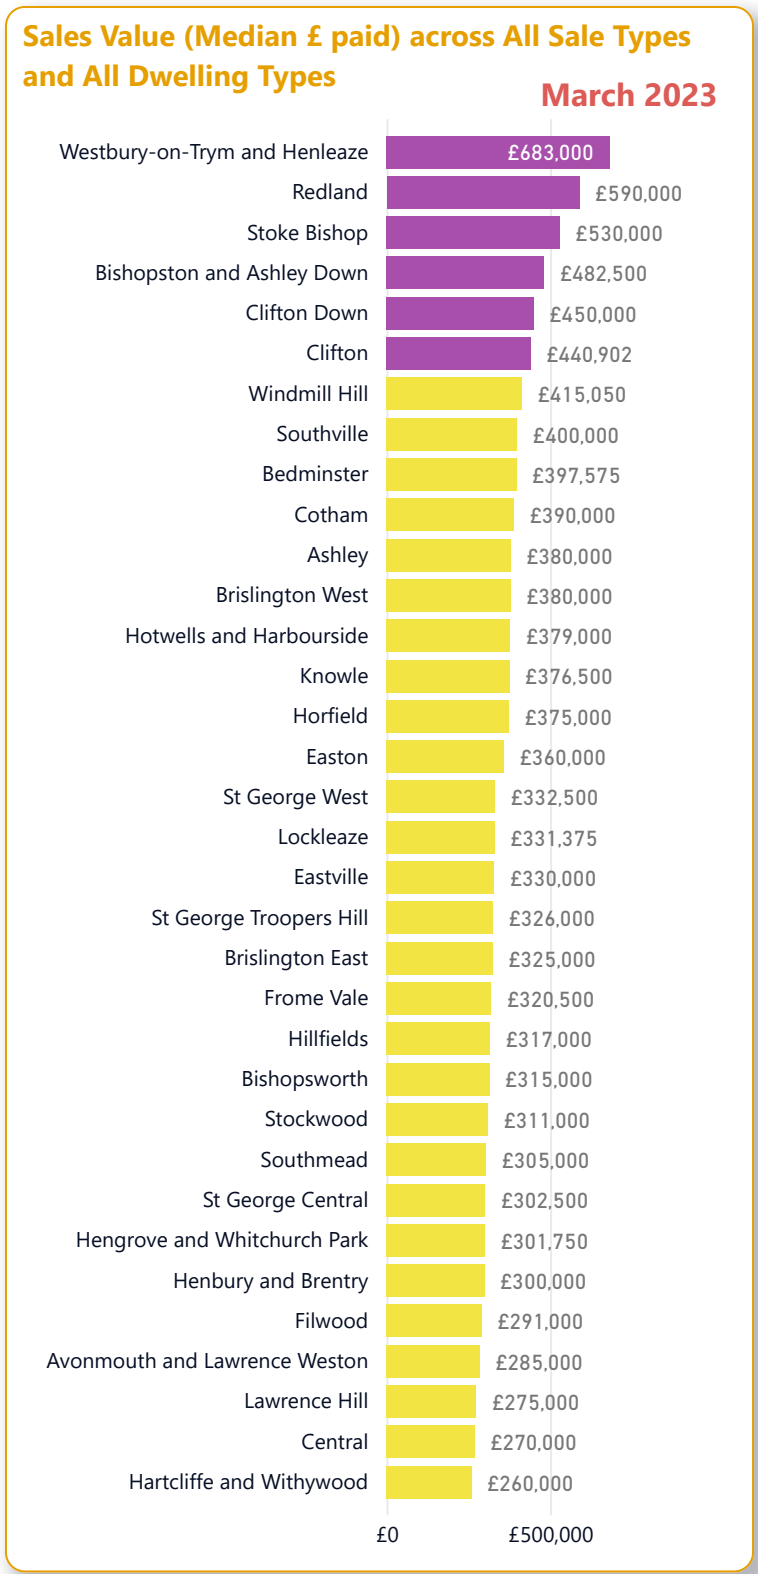

**Calculation**  
The data used takes the 'median' (middle value) price paid across each 'rolling year'. A minimum of five records are required to ensure a robust house price that is representative of prices paid in a particular area.

**Comparing wards against the Bristol Average**  
Wards are colour-coded to show any significant difference from the Bristol Average. House Price Data uses standard deviation to identify whether the gap is significant.

### Calculation

The population pyramids express the total number of people in each 5-year age band as a percentage of the wards total population. The Bristol population looks at the total citywide population. Percentages are rounded to 1 decimal point.

## Population by broad age comparison

# Hotwells & Harbourside

## Further Information

**Data**  
Census 2021 data produced by the Office for National Statistics.

**Calculation**  
Ward data expresses religion as a percentage of the total ward population. Bristol data expresses total religion as a percentage of the total population. Percentages are rounded to 1 decimal point.

**Comparing wards against the Bristol Average**  
Wards are colour-coded to show any significant difference from the Bristol Average. Religion data uses standard deviation to identify whether the gap is significant.

Significantly High

# Mapping Tools

Bristol City Council provides a number of web-based tools which are designed to provide users with access to maps and spatial information quickly and easily. **CLICK ON THE TITLE LINKS BELOW THE IMAGES** to follow the links.

## PinPoint

**Pinpoint** is designed to help locate local information on the most convenient services from a specific location. This includes details such as opening times and contact numbers.

Local information is organised under themes (e.g. community and safety, education, housing and property). In addition, there is information on council assets and the historic environment.

## My Neighbourhood

**My Neighbourhood** includes links to relevant statistical data and information such as planning applications, waste collections and political representation in your area. All of which is summarised in a single view.

You can also do a "find my nearest" search for a range of facilities to any given address.

## Know Your Place

**Know Your Place** provides access to a variety of historic maps covering the City of Bristol. The majority of the maps are scanned from original archives held at the Bristol Record Office.

The scanned images have been overlain on Modern Ordnance Survey Mastermap digital mapping and contextual layers. Also included are historical environment records, pictures, postcards and photo collections.

## Bristol ArcGIS Online Maps

**Bristol ArcGIS** is a collection of online maps, map apps and story maps.

## Open Data Bristol

**Open Data Bristol** is a site for sharing data in Bristol. It also includes a number of dashboards such as; Quality of Life, Air Quality and Council Elections.

The data can be viewed, used and re-used subject to the licence terms. There is also the ability to build maps and charts (i.e. located under the 'Tools' tab) within the platform. You can also export the data should you wish to use your own analysis tools.

# Background Information to Ward Profiles

The Ward Profiles show data for the 34 Bristol City Council wards. This update contains the latest data as of May 2024 and includes data updates for; adult social care, child poverty (absolute & relative measures), children services data, claimant count, police crime data, expanded Census lists (i.e. country of birth, industry & occupation), education, pension credits, population and quality of life. The interactive tools compare data for each of the wards against the Bristol (citywide) average and highlights any significant differences for that ward.

All datasets within the Ward Profiles tool can be downloaded from [Open Data Bristol](#). This is the Open Data platform for Bristol which includes datasets with the ability to build custom maps and charts within the platform or to export the datasets.

The Ward Profiles Tool is produced by the Insight, Performance & Intelligence Service of Bristol City Council. All data has been collated , analysed and produce by this service unless otherwise. Further products are available on our [Statistics and census information](#) web page or by email; research@bristol.gov.uk.

The Ward Profiles Tool is part of the overall Joint Strategic Needs Assessment (JSNA) process. They provide a local ward-based focus on the data produced for the JSNA Health and Wellbeing data profile, which is updated throughout the year. Further information, including the JSNA data profile and chapters, is available on our [Joint Strategic Needs \(JSNA\)](#) web page.

**Data release period** The Ward Profiles are updated regularly during the year with new data. As new data for each of the datasets is available (i.e. publication dates) at different times of the year, the data within the Ward Profiles Tool may not always align with that found in other reports. At the top of each topic page (i.e. beneath the page title) we confirm the time period that is relates.

**Data sources** for all topics covered by the Ward Profiles can be found on our Sources page.

# Significance Ratings

To compare any significant gap between a ward and the Bristol average we have used one of three methods;

**Standard Deviation** is a way of expressing how much each ward deviates from the mean value for all 34 wards in Bristol. This has been used as part of a calculation comparing each ward to the Bristol average. The difference is judged significant if it is greater/lower than the Bristol average +/- the standard deviation across all wards.

**Confidence Intervals** provide an upper (confidence interval) and lower (confidence interval) number that provides a range within which we can be confident a ward figure lies within. The level of confidence is based on a 95% certainty. The difference is judged significant if either the ward lower confidence interval is above the upper confidence interval of the Bristol average or the ward higher confidence interval is below the Bristol average lower confidence interval.

**Statistical 't' test** is a statistical test that measures the difference in group means divided by the pooled standard error of the two group means. This calculates a number (the t-value) illustrating the significance of the difference between the two group means being compared, and estimates the likelihood that this difference exists purely by chance (p-value).

## Overlapping significance ratings within ward comparison charts

Overlapping significance ratings happen where either confidence intervals or the statistical 't'-test have been used to calculate significance. Ward comparison charts are ordered with the biggest number starting at the top. Sometimes the range of wards "not significantly different" from the average may overlap with the range of wards "significantly better" and/or "significantly worse" than the average. This may appear counterintuitive at first glance but can happen due to these calculation methods. The power of statistical 't'-test to detect a significant difference is greater in wards with larger numbers of respondents or smaller standard errors. The confidence interval has a +/- probability, defined by a lower limit and upper limit, based on a 95% confidence level which is a measure of the degree of uncertainty/certainty in a sampling method.
