## Ward Profiles Tool - Last update September 2022 (v3.2)

All data has been updated where available, this includes:

- Adult Social Services
- Claimant Count
- Children Services (educational datasets)
- House Prices
- Pension Credit

This online tool is updated regularly with new data. This will include the Children Services (social care) datasets and the new Census 2021 datasets, due for release October / November 2022.

Please send any comments on this tool to: [research@bristol.gov.uk](mailto:research@bristol.gov.uk).

All datasets within the Ward Profile Tool can be downloaded from [Open Data Bristol](#).

This our abridged version of the Ward Profile Tool. It has been designed to improve the 'user experience' when viewed through mobile devices. We recognise future development work will improve compatibility.

In the event you require more information, this can be found in our [full version](#).

## Further Information

### Data

Figures quoted are 'as at' the last day of that particular month.

### Calculation

Data is expressed as a rate per 1,000 of the ward population within the cohort selected (i.e. social care data).

### Comparing wards against the Bristol Average

Wards are colour-coded to show any significant difference from the Bristol Average. Social Care Data uses standard deviation to identify whether the gap is significant.

# Child Poverty

## Children living in low income families

Select new ward

Select new topic

### Further Information

#### Data & Calculation

Data is expressed as a percentage of children living in low income families by ward, by the financial year ending (FYE). Percentages are rounded to 1 decimal point. A family must have claimed one or more of Universal Credit, Tax Credits or Housing Benefit at any point in the year to be classed as low income in these statistics.

Relative low income measures families on low income within the referenced year. Absolute low income measures families in low income compared to FYE 2011.

#### Comparing wards against the Bristol average

Wards are colour-coded to show any significant difference from the Bristol Average. To measure whether the gap is significant, child poverty data uses standard deviation..

# Crime

## Crime and Policing

Select new ward

Select new topic

### Further Information

#### Data

Figures for crime offences and youth offenders are a total for the respective year. The number of youth offenders are used as the indicator rather than the number of offences committed. Quality of Life data is from the 2021-22 survey.

#### Calculation

Crime offence and youth offender data is expressed as a rate per 1,000 of the ward population within the cohort selected (i.e. crime data). Quality of Life data is weighted by age and sex. Percentages are rounded to 1 decimal point.

#### Comparing wards against the Bristol Average

Wards are colour-coded to show any significant difference from the Bristol Average. To measure whether the gap is significant; crime offences and youth offenders data uses standard deviation whilst the quality of life data uses the statistical 't-test'.

# Education

Bristol City Council / Department for Education

Select new ward

Select new topic

## Further information

### Data

Based on all children in Bristol local authority maintained schools, academies and free schools (but not independent schools). The Bristol total will include pupils living outside the area but the ward figures will not. \*Due to the Coronavirus (Covid-19) pandemic, 2019 remains the latest attainment data available.

### Calculation

Most figures are expressed as a percentage of pupils in a given cohort. Attainment 8 and Progress 8 scores are measures from Department for Education. Attainment 8 is an average across 8 subjects (extra weighting is given to English and Maths). Progress 8 compares how well a pupil has progressed across the same 8 subjects, compared nationally to other pupils with the same prior attainment at the end of Key Stage 2. Percentages are rounded to 1 decimal point.

### Comparing wards against the Bristol Average

Wards are colour-coded to show any significant difference from the Bristol Average. Education data uses standard deviation to identify whether the gap is significant.

### Further Information

#### Data

Quality of Life data is from the 2021-22 survey. Public Health Child Measurement data for children in reception year remains the latest covering the period 2016/17 to 2018/19. This is due to the impact of the Coronavirus (Covid-19) pandemic.

#### Calculation

Both Quality of Life and Public Health Child Measurement data is expressed as a percentage. Quality of Life data is weighted by age and percentage. Public Health Child Measurement data is an average of the 3 year period. Percentages are rounded to 1 decimal point.

#### Comparing wards against the Bristol average

Wards are colour-coded to show any significant difference from the Bristol Average. To measure whether the gap is significant Public Health Child Measurement data uses statistical confidence intervals, whilst quality of life data uses the statistical 't-test'.

## Further Information

### Data & Calculation

Data represents the price paid (£) for residential dwellings sold at market value, using open data from HM Land Registry. Data is published quarterly and represents a 'rolling year'. This data starts with the year-ending March 2011.

The data used takes the 'median' (middle value) price paid across each 'rolling year'. A minimum of five records are required to ensure a robust house price that is representative of prices paid in a particular area.

### Comparing wards against the Bristol Average

## Further Information

### Data & Calculation

Data is collected from the Office for National Statistics, Business Register and Employment Survey (BRES), an employer survey conducted in September of each year.

Jobs data in this page represents employees (full and part-time), those working for a business. The data does not include the self-employed, government supported trainees and HM Forces.

The BRES records a job at the location of an employee's place of work. Outputs are subject to rounding.

The filters enable selection of the ward, sex and population breakdown. Age group selection is made by clicking the column bars within the chart. To make more than one selection at a time use CTRL + click.

**Total of age and sex group selection** provides the total based on your use of filters and the age group selection. Ward change tells you the number and percentage of that change between the years 2010 and 2020.

**Total Ward Population** only changes with your selection of the year. Total ward population change (2010 to 2020) is not affected by any selections made. It provides comparison with the population change (2010 to 2020) that is affected by your selections.

Percentages are rounded to 1 decimal point

### Further information

#### Data

Population are mid-year estimates. They have been calculated using 2011 Output Area population-weighted centroids best-fit to 2016 ward boundaries. The population-weighted centroids are based on the population distribution in 2011.

#### Calculation

The population pyramids express the total number of people in each 5-year age band as a percentage of the wards total population. The Bristol population looks at the total citywide population. Percentages are rounded to 1 decimal point.

The population by broad age comparison shows the number of people in three age bands; 0-15 years, 16-64 years and over 65 years. All 34 wards in Bristol are shown together for comparison.

Guidance

Mapping Tools

Sources

The Ward Profiles show data for the 34 Bristol City Council wards. This update contains the latest data as of September 2022. This includes new data for; adult social care, children services (educational datasets), claimant count, house prices and pension credit. Please note, due to the impact of the Coronavirus (Covid-19) pandemic it has not been possible to update all datasets for the Public Health Child Measurement Programme and Educational Attainment. The interactive tools compare data for each of the wards against the Bristol (citywide) average and highlights any significant differences for that ward.

All datasets within the Ward Profiles tool can be downloaded from [Open Data Bristol](#). This is the Open Data platform for Bristol which includes datasets with the ability to build custom maps and charts within the platform or to export the datasets.

The Ward Profiles Tool is produced by the Insight, Performance & Intelligence Service of Bristol City Council. All data has been collated , analysed and produce by this service unless otherwise. Further products are available on our [Statistics and census information](#) web page or by email; research@bristol.gov.uk.

The Ward Profiles Tool is part of the overall Joint Strategic Needs Assessment (JSNA) process. They provide a local ward-based focus on the data produced for the JSNA Health and Wellbeing data profile, which is updated throughout the year. Further information, including the JSNA data profile and chapters, is available on our [Joint Strategic Needs \(JSNA\)](#) web page.

**Data release period** The Ward Profiles are updated regularly during the year with new data. As new data for each of the datasets is available (i.e. publication dates) at different times of the year, the data within the Ward Profiles Tool may not always align with that found in other reports. At the top of each topic page (i.e. beneath the page title) we confirm the time period that is relates.

**Data sources** for all topics covered by the Ward Profiles can be found on our Sources page. These can be found through our topic selection filter at the top of each page. Alternatively, you can click the 'source data' button usually found within the 'Further Information' section

Bristol City Council provides a number of web-based tools which are designed to provide users with access to maps and spatial information quickly and easily. **CLICK ON ANY OF THE IMAGES** to follow the links.

## PinPoint

**Pinpoint** is designed to help locate local information on the most convenient services from a specific location. This includes details such as opening times and contact numbers.

Local information is organised under themes (e.g. community and safety, education, housing and property). In addition, there is information on council assets and the historic environment.

## My Neighbourhood

**My Neighbourhood** includes links to relevant statistical data and information such as planning applications, waste collections and political representation in your area. All of which is summarised in a single view.

You can also do a "find my nearest" search for a range of facilities to any given address.

## Know Your Place

**Know Your Place** provides access to a variety of historic maps covering the City of Bristol. The majority of the maps are scanned from original archives held at the Bristol Record Office.

The scanned images have been overlain on Modern Ordnance Survey Mastermap digital mapping and contextual layers. Also included are historical environment records, pictures, postcards and photo collections.

## Bristol ArcGIS Online Maps

**Bristol ArcGIS** is a collection of online maps, map apps and story maps.

## Open Data Bristol

**Open Data Bristol** is a site for sharing data in Bristol. It also includes a number of dashboards such as; Quality of Life, Air Quality and Council Elections.

The data can be viewed, used and re-used subject to the licence terms. There is also the ability to build maps and charts (i.e. located under the 'Tools' tab) within the platform. You can also export the data should you wish to use your own analysis tools.

# Significance Ratings

Please click a button

Select new topic

Guidance

To compare any significant gap between a ward and the Bristol average we have used one of three methods;

**Standard Deviation** is a way of expressing how much each ward deviates from the mean value for all 34 wards in Bristol. This has been used as part of a calculation comparing each ward to the Bristol average. The difference is judged significant if it is greater/lower than the Bristol average +/- the standard deviation across all wards.

**Confidence Intervals** provide an upper (confidence interval) and lower (confidence interval) number that provides a range within which we can be confident a ward figure lies within. The level of confidence is based on a 95% certainty. The difference is judged significant if either the ward lower confidence interval is above the upper confidence interval of the Bristol average or the ward higher confidence interval is below the Bristol average lower confidence interval.

**Statistical 't' test** is a statistical test that measures the difference in group means divided by the pooled standard error of the two group means. This calculates a number (the t-value) illustrating the significance of the difference between the two group means being compared, and estimates the likelihood that this difference exists purely by chance (p-value).

## Overlapping significance ratings within ward comparison charts

Overlapping significance ratings happen where either confidence intervals or the statistical 't'-test have been used to calculate significance. Ward comparison charts are ordered with the biggest number starting at the top. Sometimes the range of wards "not significantly different" from the average may overlap with the range of wards "significantly better" and/or "significantly worse" than the average. This may appear counterintuitive at first glance but can happen due to these calculation methods. The power of statistical 't'-test to detect a significant difference is greater in wards with larger numbers of respondents or smaller standard errors. The confidence interval has a +/- probability, defined by a lower limit and upper limit, based on a 95% confidence level which is a measure of the degree of uncertainty/certainty in a sampling method.

Select new topic

Guidance

Select Ward

Brislington West

Select Period

201520162017201820192020

Select Premature Mortality Data

All CausesCancerCardiovascular Disease

Select Sex

All PersonsFemaleMale

**Selecting a ward** The front page and each topic page provide the ability to select the ward being viewed, simply by clicking the down arrow to the right. Once selected the data displayed will remain for that ward even when you change topic page, until you change it to a different ward.

**Period** Use the down arrow to the right, to change the period.

**Data and sex selection** Most topics cover a number of indicators that can be accessed from a drop-down list '(topic name) data', such as the example shown. The quality of life (all indicators) page is unique in that your choice of indicator is based on your selection of a theme (e.g. council & democracy).

A few of the topics such as population and claimant count, enable you to breakdown the overall ward figure (i.e 'All Persons') between the male and female population. The 'population overview' that provides a detailed breakdown of the latest 'mid-year estimates' provides sex either within the chart or through the use of a filter (i.e. ward comparison chart).

**Population Age Profile**

Whilst the population comparison tool shares a number of filter choices with other topics, as previously described, it also contains some unique features.

**Selection of age group** takes place within the chart itself, by clicking on the column bars. You can select more than one age group by using CTRL+click. These selections change the figures presented in the boxes below the chart.

**Total of age & sex group** provides the sum total population from your selections (i.e. ward, sex, period and age group). **Ward change by selected age and sex** provides the number and percentage change between the years 2010 and 2020. **Total ward population** only changes by selection of each year (i.e. filter for 'period'), whilst **total ward population change** is not affected by any filter selections.
